Cuban Defector Tells of Angola Loss

WASHINGTON (AP) — The Cuban general who defected to the United States last month with his family has told U.S. interrogators that 10,000 Cuban troops have been killed in Angola since 1976, according to

administration officials. The estimate by Brigadier General Rafael del Piño Diaz is the first authoritative figure the United States has received on Cuban casualties in Angola, and U.S. officials said it was similar to their own calculations.

Cuban troops were sent to Angola in the mid-1970s to help that country's Marxist government defend itself against military attacks by foes supported by South Africa.

Campaign to Replace FAO Chief Widens

By Paul Lewis

New York Times Service ROME - The United States, Britain and several other mainly Western nations have opened a campaign to replace the head of the United Nations Food and Agriculture Organization, whom they accuse of mismanaging the organization and pursuing anti-Western policies, according to Western diplomats.

As the official meeting of the organization's 49-member executive council began Monday, delegates said efforts to replace Dr. Edouard Saouma when his second six-year term expires at the end of this year would dominate informal discussions.

In his place, they want to appoint Moise Mensah of Benin, who is deputy director of the International Fund for Agricultural Development, which also aids Third World farmers.

Dr. Saouma, a Lebanese, could

He argued before presiding Judge André Cerdini that none of the witnesses could testify to the testimony was an attempt to sidetrack the trial.

Mr. Truche, however, noted that, all of last week had been devoted to "witnesses of general interest" who had no direct evidence to offer in the case against Barbie, but who World War II, Nazism and the Gestapo.

The prosecutor said that the defense should be allowed to put its vitnesses on the stand.

Mr. Verges responded to at-tempts to block his case by shouting: "This is the trial of Verges that they are making today."

Cultural Revolution. The students complained about fumes and noise and said the college could not increase its student population because the factory was so large that the school could not build new dormitories, a school official said.

Suspect Held in Paris in Rome Slaying

PARIS (UPI) - An accused leader of the Italian Red Brigades was arrested Monday in connection with the assassination in March in Rome of an Italian Air Force general, Licio Giorgieri, the authorities said.

The police said Maurizio Locusta, accused of being a strategist for a facts about Barbie and that the Red Brigades cell in Rome, was taken into custody at a Paris hotel after an Italian magistrate ordered his arrest earlier Monday. Three other persons were arrested with him.

The Italian authorities believe Mr. Locusta was the organizer of the murder of General Giorgieri, 61, who was in charge of Italy's air and space weapons procurement. He was shot and killed by young people on a motorcycle as he was being driven home in his official car. The Combatant Communist Union, a faction of the Red Brigades, claimed were able to offer insights into responsibility. At least 15 people have been arrested and accused in the ssination.

trial since its third day except for two occasions when Judge Cerdini ordered him to be brought to court to be identified by witnesses. Barbie is accused of arresting, torturing and deporting hundreds

of Jews and French Resistance continuing." members to Nazi concentration or

allowing the witnesses to testify. Mr. Verges first called Raymond. Auhrac, 73, who was arrested June 21, 1943, in the same Gestapo raid in which Jean Moulin, a Resistance

Mr. Verges did not question Mr. Aubrac in an attempt to reveal new information about the arrest of Moulin.

Before the trial, Mr. Verges had promised to make the subject of Moulin's betrayal a key part of his defense of Barbie.

Mr. Aubrac described his arrest and interrogation by Barbie and said he had been beaten, although not tortured as severely as other

witnesses who had testified earlier. The crimes Barbie, 73, is accused

of are alleged to have occurred Another of the six defense wit-

nesses, Eddine Lakdar-Toumi, 50, testified about a complaint he filed in 1984 against the French govern-

ment. The complaint alleged that the French Army during "pacifications operations" had committed the crimes against his father, an Algeri-an resistance fighter who disappeared.

The complaint was dismissed, because the French government cused of torturing Algerians.

Ulrich Brandenburg, an embassy spokesman, said Karl-Heinz and Monika Rust would visit their 19-year-old son on Tuesday, but did not say where the meeting would take place.

The pilot has been in Soviet custody since May 28, when he set down is Red Square after flying a single-engine Cessna from Helsinki through strictly controlled Soviet airspace. No formal charges have been an-nounced, and Soviet officials have said only that their investigation is

extermination camps. Judge Cerdini ruled in favor of East Berlin Rock Fans Protest Again

BERLIN (Reuters) — A crowd of youths again chanted "The wall must go!" on Sunday night after an open-air rock concert in East Berlin, but this time the police did, not intervene and there was no violence. A crowd of several hundred lingered in Friedrichshain Park after a Drivit and several hundred the comparison of the formation of the several hundred.

in which Jean Moulin, a Resistance leader, was apprehended. Questions were focused on con-tradictions between Mr. Aubra's earlier testimony and more recent comments.

policemen scaling off the area. It was the most serious outbreak of public discontent in East Berlin in nearly 10 years. But East German officials denied that the incidents had taken place, and ascribed them to the fantasy" of Western correspondents.

Sri Lanka Allows Relief for Tamils

COLOMBO, Sri Lanka (Reuters) — Sri Lanka, whose navy nmed back an Indian relief flotilla earlier in June, agreed Monday to let unarmed Indian vessels bring supplies to Tamils on the Jaffna Peninsula. Officials in New Delhi said that the Tamils were near starvation, a charge that Sri Lanka denied, after a blockade and the army's anti-guerrilla offensive. The supplies will be inspected, escorted and unloaded under Sri Lankan supervision, according to an agreement reached by the two countries. two countries.

There had been no discussion of the total amount of the aid, but 1,000 tons of food, medicine and fuel were ready for shipment from Indian ports, possibly by the end of the week, diplomatic sources said.

For the Record

NATO's 'Slippery Slope'

and hear the phrase: "the slipperv slope to how awful it is to base security on the threat denuelearization." It signals a case of European jitters about nuclear weapons and arms control. The West has finally reached agreement on banning medium- and shortrange missiles from Europe. But European jitters remain. They demand an honest response from Washington, and from West European leaders themselves.

Page 2

Page 6

;e 12

The anxieties arise from a sense of being overwheimed hy one Soviet arms control initiative after another, of being on the defensive, of not knowing where arms control is leading and of being unsure of Reagan administration thinking. Astonishingly, a re-cent U.S. Information Agency opinion survey shows that by wide margins Europeans think Mikhail Gorbachev has done more for peace and arms control than President Reagan, and that Washington is more likely than Moscow to violate arms pacts.

Moscow's very enthusiasm for arms control can be unsettling. In effect, it says: Worried there'd be an imbalance in shortrange missiles if we remove our mediumrange missiles? We'll remove the short-range ones. You're unhappy about baulefield weapons? Out with those too, Asymmetries in conventional forces worry you? Let's get our experts together and fix that." Such endless flexibility leaves Europeans torn between feelings of opportunity and danger.

American leadership confusions about how to maintain deterrence contribute to the unease. The West decided years ago that its security lay in deterrence, achieved through. among other things, threat of nuclear retalia-

Listen to NATO officials for five minutes tion. Then Mr. Reagan began to talk about of using nuclear weapons. Much better, he said, to rely on defense — an impenetrable space based shield. Then he went to Revkjavik and talked longingly of doing away with all nuclear weapons. Bewildered allies suddeniv began to feel queasy about the United States's commitment to Europe.

Growing public antagonism to nuclear arms complicates the situation. This sentiment must be respected. It also deserves a straightforward response: Abolition of nuclear weapons is nowhere in the works. Nuclear weapons remain a necessary part of deterrence. Arms control can be pursued without sacrificing deterrence and without leading to denuclearization.

But Western leaders usually fear to acknowledge reliance on nuclear weapons. They fear the public will not understand. They fear Moscow will suck the West into talks on denuclearization. that political pressures in Western Europe for denuclearization will be uncontainable. So they drag their heels on arms control and make Moscow look even better in the public opinion war. They end up having unrealistic discussions of deterrence and unreasonable concerns about arms control.

Better for leaders to talk openly and honestly about maintaining nuclear deter-rence and pursuing the gradual reduction of nuclear arms. Guly in this way can they build the necessary public support for both deterrence and arms control. An uphill climb, yes, but not a slippery slope. - THE NEW YORK TIMES.

the history of nations. Let us try to picture the situation then. Two disastrous world wars lay behind us. America had decided both of them. At the end of World War 11, Europe lay in ruins. Inconceivable human pain, injustice and slaughter had occurred. Millions of Jews had become the victims of an unprecedented crume. The Poles, the Rus-sians - and the Germans, too -

In this situation, we young people who had miraculously survived set about huilding a new life. What we wanted most were jundamental ethics. We had witnessed what happens when the human mind is distorted by us Germans. It was addressed to all manic racism, terror and violence. We had discovered that man cannot of Europe, including the East. As

C AMBRIDGE, Massachusetts -On Commencement Day in

June 1947, Secretary of State George

Marshall addressed Harvard gradu-

ates and alumni. America and the

world. His speech has gone down in

were deeply suffering, as were oth-

er nations. Winners and losers shared

the terrible burden. Europe was dev-

astated and exhausted.

Marshall said, it was "directed not live on hread alone. Without bread, against any country or doctrine." The plan was selfless: The assishowever, man cannot survive either. First food, then morals," as Brecht

tance was provided with no political said in "The Threepeany Opera." Misery prevailed in Europe: expulstrings. The recipients were free to sion, displacement, hunger, no pro-duction, no material resources, no prospects, little hope. In this situation Marshall announced his program. He proclaimed it without pathos. rather succinctly and soberly. His plan is upparalleled in the history of world powers in generosity, selflessness and vision. It was the work of a far-sighted. highly responsible U.S. administration. Europe was called upon to regain its life and its political role, the decisive impetus being provided by

America's material assistance. The plan was generous: It was intended for everyone, including the enemies defeated in the war, not least

decide on the distribution and use. The plan was visionary. Great victors seldom are; they tend to carry on

with their war objectives even in peacetime. They seek to ensure that defeated adversaries or weakened al-lies remain dependent. The happiest times in history, however, occurred whenever victors assisted everyone to recover and helped the defeated to regain their self-esteem.

America did not misuse its superiority by moral arrogance or political coercion. It did not seek to maintain denendence. Instead, its aim was to restore the confidence of the Europeans in their own strength, in their own political future. The Marshall Plan bears assuments to the strength of a

This is adapted from a commencement speech by the president of West Germany that was delivered last week at Harvard University. It is the first of two parts. pression to its own dignity by respecting the dignity of other people. Marshall was not an ideologist.

1.11.215.00.00.00.00

but a realist. He was all too familiar with the temptation of nations to adhere to mutual prejudices, instead dangerous time and again. We are facing similar dangers today. What has become of the Marshall

Plan in these 40 years? What has been achieved? What is still unfinished? The first answer is quite clear: The Marshall Plan laid foundations for

new life in Europe. The nations that benefited from it are free and sovereign. They experienced an unprecedented recovery. The plan is the most successful example to date of a policy

aimed at assistance for self-help. The Marshall Plan simultaneousand growing unity. It gave rise to the mensions, to bear our fair share of mensions, to bear our fair share of European Community. It focused burdens or to discharge our political attention on global tasks; worldwide forms of cooperation, such as the

great and free nation to define its own International Monetary Fund, are legitimate interests. America gave ex- the product of its economic momen tum. The Marshall Plan is and will remain the most fundamental Western achievement since the war,

luthe D

The Ple

The plan also gave decisive impetus . to trans-Atlantic partnership. Maishall was not only concerned with of seriously trying to understand oth-ers. In history, this has proved to be ca and Europe. His thoughts were deeply rooted in the common stock a of ideas of Europeans and Americans. They include universal human rights, cultural openness among nations, free world trade. It is these common values and goals, and not-missiles, that give the North Atlantic Alliance its identity and permanences

The alliance has worked well for four decades. Yet there are misgivings. Many Americans regard us Europeans not only as strong economic rivals, but above all as affluent egotists who constantly criticize America but are not. ly acted as a trigger for cooperation able or willing to think in global dias wavering partners with a provincial : outlock, as "Euro-wimps." Looking in the other direction, Europeans believe that their Ameri-

can partners are marked by erratic confusion: On the one hand, Americans supposedly claim a rather uni-lateral leadership role in the world. On the other hand, an inward-looking mentality prevails. Many feel that the Americans are living beyond their means. They point out that Ameri-cans produce less than they consume and save less than most other countries, but draw on a disproportionate-ly large share of the world's savings. 'o offset this deficit.

I am neither able nor willing to render judgment on such allegations More important, in my view, is the perception that our societies have similar weaknesses. Our democracies function well, but they do not educate us to pay attention to the problems of other countries, although our, own destiny depends on their destinies. Americans and Europeans have above all learned to organize their. own interests, to strengthen their : domestic positions and to increase their personal prosperity. Our societ-. ies are marked by a tight network of . expectations and entitlements.

To be sure, politicians - my own . guild - often reinforce this trend, They are not a club of selfless saints. Their performance in resolving problems rarely matches their excel-ites lence in fighting for power. All too often they are captives of local and regional interests and demands, tied down like Swift's Gulliver by count ... less little ropes and chains.

Must we accept that democracy, trains us better to exercise our rights than to perceive our duties? Have we really divorced freedom from responsibility? Do young graduates from Harvard on Heidelberg really want to enter a society of affinence which be-gins to stutier when asked to specify what its goals are, what it believes in

and what it is inspired by? I think not. One of the major challenges which stands out today concerns the Third World. Marshall spoke out against, "hunger, poverty, desperation and chaos." His plan helped the recipient" countries to overcome their need. Vast sections of his speech might almosthave been conceived today, if you only replace the word "Europe" by "Third

AIDS: Good News and Bad Is the AIDS epidemic scything indiscriminately through the population like a medieval plague? Or is it still largely con-

fined to high-risk groups like drug addicts, homosexuals and their sexual partners? The answer is critical because it determines which of two quite different strategies soci-ety pursues. The Reagan administration. almost certainly, has picked the wrong answer and the wrong policy.

Administration officials liken the disease to the Black Death and now the president himself declares that "AIDS is surreptitiously spreading throughout our popula-By contrast, here is the judgment of tion." Harold Jaffe, chief AIDS epidemiologist at the federal Centers for Disease Control:

"We really have not seen much evidence for the spread of the virus (outside) risk groups. For most people, the risk of AIDS is essentially zero.... Why it isn't getting oot beyond the immediate sexual partners of the risk-group members, I don't know. Is the disease going to sweep into the heterosexual population, like Africa? I don't see it."

The evidence for the optimistic view, though complete, comes from the AIDS virus's differing rate of spread among different groups. It spread explosively among homosexuals, because they often engaged in sexual practices now known to promote transmission, and among addicts because they inject infected blood directly into their bloodstream. But several lines of evidence continue to suggest that the tate of spread among beterosexuals in the United States is at present considerably slower.

• The virus can clearly be transmitted heterosexually. Some studies of the partners of risk group members show that about one out of five has become infected. But

• If AIDS is to spread widely, that would surely be evident in New York, where the virus has been endemic for a decade and now infects an estimated 500,000 New Yorkers in high-risk groups. Some 40 percent of people tested at an East Side AIDS testing site in Manhattan last month were women at low risk, from the population at large. No: one tested positive for the AIDS virus.

The AIDS virus may yet move into the population at large. Those outside the risk groups cannot in any way relax their guard. But these figures do suggest that the epidemic may sull be largely confined, and that there is still the chance of keeping it so. That is the good news about AIDS.

The bad news is the continuing devastation of the communities at risk. Homosexuals have borne the nightmare with a courage and resourcefulness from which others may learn. Nothing can replace the wasted young lives, or the toll in professional and artistic worlds. Much of a talented commuaity is living under this mortal shadow, desperately waiting for a treatment to be developed. May it come soon.

Bad news about AIDS continues to come from Central and East Africa. Some surveys show a high incidence of the virus among both men and women. Means to curb its spread, like education, screening the blood supply and sterilizing hospital needles, are often unknown or unaffordable. Western aid is increasing but America could do still more.

The lack of spread evident in the United States has clear implications for policy: Focus every possible effort on containing the virus.... Begin a serious program of methadone and other treatment fot all drug addicts who seek it ... Ignore any protests of stigmatization and persuade the leaders of black and Hispanic communities beset by drugs to spread word of the dangers of AIDS. Those are the hard, politically thankless tasks that the administration has so far overlooked. Instead, its spokesmen prefer to orate about Black Death, infecting the population at large with an epidemic of fear. The public, frightened, then demands firmer measures: the administration responds with irrelevant exhortations to test applicants for marriage licenses. AIDS is not the Black Death. It could become so, particularly if the administration continues to preach and posture --and ignore the main threat. -THE NEW YORK TIMES.

get washed away even if the Iran-Iraq war ends tomorrow. By what authority does the United States in-sist on freedom of passage? Is it the doctrine of freedom of the seas laid down by the Dutch jurist. Hugo Grotius. in 1609? Well, no, because it was a U.S. president. Harry Truman, who announced that the doctrine had had its day when, in 1945, he proclaimed U.S. jurisdiction over the seabed resources of the conti-nental shelf. Later, Chile, Peru and Ecuador raised the stakes by claiming 200-mile (320-kilometer) maritime zones and seizing U.S. tuna

boats fishing in their waters. Is it the Law of the Sea, the great negotiating text fathered by the United Nations with the enthusiastic participation of the United States, which carefully chiseled an accommodation hetween new coastal jurisdictions and traditional high seas freedom? No, because one of the early acts of President Reagan was to turn his back on nine years' work and pull the United States oot of the negotiations.

Gulf crisis is a question that will not

In short, there is a legal limbo. While the United States calls for freedom of navigation" in the Gulf, much of the world notes quietly that Washington appears prepared to call on international law only when it suits its own purposes. If the United States can interotet sea law as it chooses, so will every-

arguably the most complex piece of international law ever negotiated. The negotiations began in an era when many coastal states appeared to have an insatiable desire to bring large areas of the ocean under their control for political and economic purposes. It looked as if the hunge toward 200-mile economic zones might turn into a quest for 200-mile territorial zones that would destroy forever the concept of the old 3-mile limit, which effectively allowed for free passage through most of the world's narrow straits.

The Law of the Sea treaty was a bargain. There were commitments to roll back claims of territorial juris-

into international law the right to free passage through 100 straits narrower than 24 miles (this to apply to all ships, military or civilian, on the surface or submerged); and, while recognizing 200-mile economic zones, to prohibit congruent restrictions on the passage of ships or the overflights of planes.

cate part of the vast ocean floor to an

diction wider than 12 miles: to write

The other part of the bargain, demanded by some coastal states and small landlocked nations, was the right of access to the vast mineral deposits oo the floor of the ocean outside 300-mile comomic zones. It was this that sank the Law of the Sea conference. The Reagan administration could not accept the demand of Third World nations to allo-

OPINION Of Marshall and More: The Feats and Conceits of 40 Years

By Richard von Weizsäcker

that coin has another side. Despite repeated, unprotected intercourse, four out of five of the partners have remained uninfected. • If the virus were spreading fast hetero-

sexually from the risk groups, among the first to be infected might be those with other sexually transmitted diseases. Three cities have done AIDS testing at venereal disease clinics among people who say they are not homosexuals, addicts or their partners. The results are striking, Among 205 attending a clinic in Queens. New York, one has the virus, Among 1.000 screened in Denver, only one has tested positive. Among 300 in Seattle, none are positive.

The Trouble in Panama

Fearing, he said, God's wrath and also having just been fired, the second-ranking officer in Panama's defense forces, which have run the country for nearly 20 years, told all. Colonel Roberto Diaz Herrera said his boss, General Manuel Noriega, had, as alleged, altered hy fraud the outcome of presi-dential elections in 1984 and ordered the assassination of a critic. He put a number (S12 million) on the sum the shah of Iran supposedly paid the late dictator Omar Torrijos to take refuge in Panama, and charged. without proof, that General Noriega among others, including the CIA, had had a hand in the accident that took General Torrijos's life. Oh, ves, the colonel confessed he had made big mooey selling visas to Cubans.

All this hanging out of dirty linen was enough to galvanize a country accustomed to living easily with a high level of official corruption and military intrusiveness. All the political parties, the private sector, the church and many citizens seem to have decided they have had enough. Their protests were met by the armed forces of General Noriega, who has now imposed something like military law, choked off the opposition press and undertaken arbitrary arrests. He is

: [

the kind of Latin strongman most people thought did not exist anymore. Everything he is doing now - calling out troops, blaming the CIA - fits with what could be expected from someone who is trying to save his skin and protect his ill-gotten gains.

Panama is a country created by foreign intrigue, and it remains a country whose politics rotate on the pressures and wishes. real and presumed, of the United States. Traditionally, U.S. policy has aimed at ensuring as much democracy as was deemed consistent with the stability demanded by the presence of the strategic Panama Canal Panamanians habitually scan official Ameri-can words, including U.S. press leaks, for signs of what is on Washington's mind. The signs Panama is reading these days

the calls paid by the American ambassador, for instance - tend toward the cautious and the ambiguous. This should not be. No Panamanian should have the slightest doubt that Washington favors prompt peaceful progress toward a situation in which fairly elected civilians run the country, the army stays in the barracks and duly convicted criminals sit in jail.

P ARIS - The full moon shone bright on election night for Margaret Thatcher. Even her foes must salute the extraordinary feat of holding on, after eight years, with her majority little dented. This time there was no Falklands factor to boost her. But neither was there the customary fatigue factor - when governments get tired and the public tires of them. Defense questions loomed large in

the pre-electoral debate. A few months back they could have dominated the voung, in Mrs. Thatcher's favor, because of the Laborites' espousal of unilateral nuclear disarmament. But these waters were muddled by international movement toward the doublezero option. What voters did see clearly was the economic situation. With the wisdom of hindsight, it is

easy to see what swung the vote. When a party promises new tax cuts to help inese in work, who will vote against it except those lacking a job? The jobless are numerous but far outweighed by the employed.

Before the election. Mrs. Thatcher had already taken budgetary action to woo the voters, boosting public spending and reducing income tax. And as international confidence in a Thatcher victory grew, the pound rose and enabled tindeed necessitated) a lowering of interest rates. Her somewhat confused promises to allow schools some escape from the state system probably attracted the votes of lower-middle-class parents. The British public might now thrive on auto-suggestion: Every day, in every way. I'm doing better and better. The benefits of this to Europe and the North Ailantic Treaty Organization would be huge, because Mrs. Thatcher has become less insular the longet she has reigned and her lead in international polities may prove vital

in the orevailing vacuum. But if momentary economic euphoria gave her a third term. Mrs. Thatcher's record is mixed in this field, and the problems ahead enormous. Inflation has been shrunk, but less than in most major economies. Growth has recently been moderately

good, but not enough to offset the recession of the early Thatcher years. In her first government, unemployment soared from 5 percent to almost 13 percent, and it has stuck near there.

The recent small shrinkage may merely reflect statistical maisage and temporary training schemes. The trade unions have been made less disruptive. but whether this reflects much more than the pressures of joblessness will be tased when unemployment really starts to fall. Signally, there has been little resurgence of the capital spending Britain sorely needs now that North Sea oil is dwindling.

In some ways, Mrs. Thatcher's best allies were ptobably her opponents. Both promised a strong attack on un-

By John Fay ing. Labor proposed to finance this partly by increasing taxes, which would not necessarily yield more jobs, and by making companies repatriate capital invested abroad — thereby re-

balance of payments. The uneasy - perhaps doomed -Alliance between the Liberals and Social Democrats envisaged higher government borrowing, which would be far from riskless. Both opposition factions undertook to avoid wage inflation, Britain's perennial headache. through more intensive consultation with unions and employers, which will hardly have impressed the voters. The morning after her briumph,

Whatever resources? When politicians are unanimous on any issue, it is time to pause. Senator Albert Gore of Transsee has called for a "Manhattan Project" on AIDS. Why should the fight against AIDS be the exclusive beneficia-seeking entry to the United States — were both moderate and reasonable. ry of a huge government effort?

Because AIDS is latal? Since 1981, AIDS has killed about 20,000 Americans. Heart disease kills 65,000 every month. Because AIDS strikes young people in the prime of their lives? Schizophrenis, which afflicts 1,650,000 Americans, is also primarily a disease of young people. It destroys their minds. (Many of the wretched homeless are finishing long ca-reers as schizophrenics.) Because AIDS is going to strike a lot of people in the future? The surgeon general estimates that hy the end of 1991 e total of 270,000 AIDS cases will have occurred in the United States. This year alone there will be 965,000 new cancer cases.

It is not good politics to come out against an AIDS cure, but it is worth against an AIDS cure, but it is worth asking the question: Why should AIDS by a privileged disease — federally pro-tected, as it were — while other diseases, many of which cause suffering in many more Americans, are not?

The only possible answer is that AIDS is such an explosive threat to society that it must be stopped now. The key to this claim is that AIDS is breaking through to the general popu-lation. But the latest numbers indicate otherwise, Acquired immune deficiency syndrome remains largely confined to two groups: male homosexuals and intravenous drug abusers. They contin-. ue to account for 9 out of 10 cases. Heterosexual transmission accounts for no more than 4 percent of cases.

A study presented in Washington at . serve special compassion and special the Third International Conference, on support have some explaining to do. So AIDS demonstrates how difficult heterosexual transmission is. It showed that women whose partners had AIDS needed a very large number of sexual con-

Linore than 600 times with an AIDS patient, only one in three contracted the disease. If 1 percent of random males are infected with AIDS, a woman would thus need 60,000 individual sexual contacts with American males to incur a one-third chance of contracting AIDS. Of the two major risk groups, drug abusers are not organized. Gays are, Gay-

rights groups have turned AIDS into a political issue. They have two principal demands on the government; immediate

And booed they were, despite the fact that the proposals the

administration offered - lesting prison-

Gays have every right to lobby. But the general public has an equal right to ques-tion their sense of entitlement. Other groups have other diseases, some just as terrible, some more so. Medical claims on society, like nonmedical claims, must be tested against each other. Yet the AIDS constituency has been adamant in demanding special protection.

And getting it. In August, the Distinct of Columbia made it illegal for insurance companies to require AIDS tests for peo-Normally, insurance companies want to know whether you are subject to a life-threatening illness. Getting insurance is difficult if you are. The callousness of the actuarial table is an argument perhaps for national health insurance. It is not an

come from? After all, unlike, say, a brain tumor, AIDS is preventable. We know exactly how to contract it and exactly how to prevent it. Preventative measures are not particularly complicated. Moreover, they are all within the power of the individual to control. With rare exceptions, contracting AIDS, like contracting lung cancer, requires the collabora-tion of the victim. That is not true of many other catastrophic illnesses.

This does not mean that AIDS victims deserve neither our compassion nor our support. It does mean that those who claim that AIDS victims defar, they have not done it.

On Capitol Hill, when money is prefcrentially funneled to a particular discase in the news, cynics call it the "dis-case-of-the-month cluh" syndrome. ease-of-the-month cluin synctrome. LETTERS TO THE EDITOR

it is believed that 70 percent of Eich-Behind the Enduring Peace

Regarding the opinion cohonn "Two Zeros Too Many in Garbacher's Offer" (May 30) by Joseph Joffe:

Mr. Joffe reiterates the tired old argument about nuclear weapons having kept the peace for 40 years. There is no evidence for this, and there will be no one left alive if it is proved wrong. It could equally well be argued that nuclear weap-ons have prevented a European peace ettlement, such as that in 1815 after Napoleon's defeat, which was achieved despite the disputes among the victorious allies. A far more probable reason for the absence of a major war in Europe is the fact that Germany, the main aggressor nation since the 1870s, has been kept in

check by the occupying powers. ROSE KNIGHT. Canterbury, England.

On Austria's Past

Professor G.-K. Kindermann's revisionist history regarding Austria's recent, past (Letters, June 5) cannot go unchal-lenged. Mr. Kindermann claims that "between 1938 and 1945, there was no Austrian Vichy-type government." Of course not, Austria was then a willing member of the German Reich, with an estimated 10 percent of the population in the Nazi Party (as against 7 percent in Germany). Mr. Kindermann says that "Hitler hated Austria ... so deeply that he for-bade its very name.... " But of course hade its very name.... " But of course it was only the name he hated and not the country or its people (who were ian leadership." and that "the Führer highly visible in the SS and the Gestapo; principle is now penetrating the Old as

mann's staff was Austrian.) He says: "Those thousands of Austri-ans who actively and voluntarily cooperated with Nazi Germany cannot fairly be considered as representing Austria" And wby not, may one ask? After all, they were, until the tides of war started num-

ing, the overwhelming majority. The regime of Chaocellor Engelben Dollfuss that Mr. Kindermann extols (and that Kurt Waldheim supported) was in reality less of an enemy than a watered-down rival of Hiller and Mussolini, a weakly and anti-Semitic oneparty state that many of its adherents (though not the leaders) considered a mere preliminary stage toward Nazism, Perhaps a few quotations (all from

1934) may prove the point. This from Ernst Rudiger von Starhemberg the leader of the Heimwehr, an army of thugs that helped to keep Chancellor Dollfuss in power: "Our aim is the unmitigated realization of fascist ideas."

This from an "anti-Nazi" poster of the Fatherland Front (the only authorized party) searching hard for an issue: "What is Hitler's aim? He wants to lead us inin slavery by pretending that we Austrians are all Jews and Jewish mixtures, hence descendants of a despised race. To him there are no Arian Austrians!"

From Cardinal Theodor Innitzer, who in 1938 welcomed the Nazis into Austria (and lived to regret it), hut who io 1934 proclaimed in an interview that "divine providence is guiding the world away from democratic forms into authoritar-

well as the New World. It has ruled the

Church from the beginning," As for the suppressed "armed Nazi uprising" of July 1934, was it really the crushing defeat for Hider that Mr. Kindermann claims, or not rather a fight for power within the system, with the Heimwehr playing a more than dubious role? Sure Austria in the 1930s resisted the Reich, but did it actually resist Nazism? G.S. TROLLER.

Paris.

The Red Square Wonder

"A tale full of wonders," as The New York Times describes the Mathias Rust flight, sums it up perfectly. In my view it surely doesn't have any challenger as the escapade of the century.

Congratulations to the writer of the editorial, "A Dream Come True" (June 3); and thank you for reproducing it for the benefit of those of us who would otherwise have missed this fine writing. AJOA YEBOAH-AFARI. Accta, Ghana.

Fields in the West

Regarding the report "Status of Japa-nese Farmers Erodes" (June 6):

If the Japanese repealed costly subsidies to rice growers, within one or two years they could save enough money to buy substantial parts of California, Louisiana and Arkansas and export rice production as they now do with automobiles. JAMES M. BOGIN.

Hong Kong.

The Way to the White House Is Through the Living Room

By Steve Sherman small house in a hard-working neighbor-

HANCOCK. New Hampshire - The story goes that a farmer driving a load of hav stopped at the entrance to a long covered bridge and studied it. "I can get through this end all right," he said before turning back. "but I sure can't squeeze through that one down there."

Perspective, as they say, is all, and the New Hampshire presidential primary focuses the national eye as no other primary can. Candidates know that by

MEANWHILE

next February only a few of them are going 10 squeeze through and head on down the road to the White House.

How does a state 0.3 percent the size of the nation with 0.4 percent of the population do it? It does it because it has always done it, since 1952. So jealously guarded is this first-in-the-nation primary that the state has legislated it to be the first. What makes the New Hampshire pri-

mary so singular, however, is not merely being early but the way that people here go about assessing the candidates. One Democrane hopeful, Bruce Bab-bitt, attended a typical "coffee" recently in Keene, a town of 21,000 in the south-

estern corner of the state. Forty people showed up. One of them commented to "He's late." Fifteen minutes. New Hampshire's contribution is a reminder to candidates that they are meeting real people. They meet them in bundreds of living rooms, where the people answer back. The candidates bave to deal with them, or goodbye. The citizens take their role seriously and they are not easily impressed. Critics who quadrennially moan and

groan about the influence of New Hampshire on the race point out that the state is not typical of the country, as if California or Nehraska were. Of course New Hampshire is not typical. This year, statewide unemployment has hovered around 2.7 percent, now considered no unemployment hut merely figures to represent people hetween obs. New Hampshire ranks 49th in state and local tax revenues, 43d in [ederal expenditures, Rock-bottom taxes can mean meager services,

On the other hand, despite low teacher salaries, New Hampshire placed first in the nation in the Scholastic Aptitude Tests scores last year, as it has every year for the last five years.

What the people of New Hampshire do represent are the hopes, desires, fears, concerns and ideals of the country as a whole. In this sense, yes, they are a sample of the national soup.

Fewer and fewer states are positioned for personal contact beyond a handshake and a shoeshine. Here, the candidate is the campaign. People demand direct interaction; a distant wave and a TV hlip or two do not suffice.

So when Mr. Bahbitt arrived at the

hood, he made the slow rounds of shak-

ing hands and chaiting. Then the candi-

date took to a side wall, and in this

homey, literate, scrutinizing crowd he spoke for 10 minutes. As is the custom,

he opened the rest of the hour to ques-

tions and, politely, got good and grilled.

One woman kept after Mr. Babbitt about nuclear power. She challenged his

about nuclear power. She challenged his position of managing existing plants and developing no more. "It's either a poisonous technology or it isn't." she said, wanting them all stopped. Mr. Bahbitt asked, to laughs. "Can 1 win

about to land a financial backer and to sign a contract with researchers at the Centre National de la Recherche Scientifique.

At 35, Audibet is a driven designer who believes that new fashion can only come out of new fabrics. He is known in the trade for his research into stretch fabrics. Pierre Cardin indicated recently that this was the new directioo and that his next collection would start with 30 models made of stretch fabrics.

Stretch fabrics have made an impact both in Paris, where they are being used by the avant-garde designer Jean-Paul Gaultier, and in the United States, where one can oow find all the traditiooal fabrics - jersey, flannel, crepe and so DD

mixed with elastic fibers. Audibet refused to compromise for years in order to push on with his experiments. "To change fashion, you have to change fabrics," he said. "Otherwise, every 10 years, you end up with some kind of retro fashion because you keep using the same old fabrics. The American market is beginning to understand this, and the Japanese are very aware of fabric research. I'm also in contact with the Freoch fabric house Bianchini Férier, which, after five years, is taking all this very seriously.

Stretch fabrics, according to Au-dibet, are the most comfortable fabrics now available. Once a woman starts wearing stretchable clothes, she cannot put oo anything else," he said, Audibet also claims that these expendable fabrics do away with seams, buttons and sippers, and give clothes a new and different look.

"I can make as many dresses as you want in one day," said Kelly, who landed the job making stage costumes in a tiny botel room with an old Singer sewing machine.

Things have changed for Kelly. He now works for the Victoire boutique, whose manager, Françoise Chassagnae, was the first to give him a real chance. Besides the Victoire collection and his own, Kelly also designs for Benetton.

Rock and Romantic Vulgarity

By Mike Zwerin PARIS - Robert Pattison's tonal Herald Tribune The Triumph of Vulgarity: Rock Music in the Mirror of Ro-manticism" (Oxford University Press) makes a case for the vulgarity of rock, a premise some might consider self-explanatory. The publishers call it a "thinker's guide to rock 'n' roll."

Referring to the Vulgate Bible, Pattison, who teaches humanities at Long Island University in New York, deals with vulgarity as "relating to the common people" or "mass culture" rather than "in bad taste." Vulgarity is "something high culture has long despised but rarely attempted to define." It has been "greeted with the same disapprobation from Horace to Dr. Johnson by generation after generation of Western sensibility." Shakespeare drew on the vulgar

and the Satyricon was a vulgar novcl but "with the help of ideas inherent in 19th century Romanti-cism," vulgarity "has slipped the strains imposed on it by refined culture. In cultivated literature, rulgarity either ridicules itself or reveals a transcendent value which untutored sensibilities cannot comprehend. . . . In the 20th century, vulgarity established its loud arts and freed itself from the limits pre-

scribed for it by culture."

In Pattison's view, rock mirrors affliction from which Romantic he-19th-century Romanticism. We roes from Don Giovanni to Dorian hear Walt Whitman's "barbaric Gray are in perpenal flight." International Herald Tribune Special News Report **Aerospace:** Military Markets

Tussle With U.S. Japan Wants "A Warplane

Of Its Own

By Daniel Sneider

OKYO - Controversy is certain to accompany whatever decision the Japanese government makes in sclecting a new jet fighter for its FSX

project. American congressional leaders have al-ready condemned the possible selection of a domestically developed plane proposed by Ja-pan's aeronautics industry. Last March, Sena-tor John C, Danforth, a prominent spokesman on trade issues, urged the Reagan administra-tion to forcefully support American manufac-turers trying to sell their aircraft to Japan. The Missouri Republican wrote in a letter that Japan was ready to "develop and build"

its own aircraft rather than buy "a superior American product." U.S. producers, Mr. Dan-"forth said, "want to sell a high-technology product [Japan] freely admits it wants. It is a high-quality product offered at a competitive price. The Japanese produce nothing that comes close."

American officials avoid making a link be-tween defense and trade. But they argue that, on military grounds alone, it does not make sense for Japan to spend its limited defense resources on a more costly domestic aircraft. Moreover, Pentagon officials say that Japanese estimates of the cost of domestic development are understated by perhaps as much as half. Leaders of the Japanese industry, and their supporters in the defense establishment, see the issue quite differently. The future of Ja-nan's accorace industry, they half of Japanese pan's acrospace industry, they believe, is at stake in the FSX project. "If we are not given the opportunity to carry out the FSX development program now," an official of the Society

of Japanese Aerospace Companies (SJAC) in-"sisted, "another such development program is . not expected for 20 or 30 years." - "The aircraft industry is one of the major elements which compose the defense of our country," the SJAC official said, "a pioneer forging the frontier of advanced technology "where the future of our nation lies." where the future of our nation lies."

Japanese industry, which has joined in a five-company consortium to build FSX, con-Jends that it can design and develop a state-ofthe-art fighter at competitive cost. "I am confi-"dent_that our proposal is best for the performance and cost," said Yoshio Sasaki, the general manager of Mitsubishi Heavy Indus-tries (MHI) aircraft division. MHI is Japan's

leading aerospace and defense firm. The Japan Defense Agency hopes to deploy the FSX (Support Fighter Experimental) sometime in the mid-1990s. The aircraft is to replace the aging F-1 support fighter, Japan's only other domestically developed supersonic aircraft. The defense agency plans to build between 100 and 170 aircraft. The contract, industry sources say, is worth \$7 billion to 10 and and makement The new fighter must be agile, stealthy, high-tech and good in a 'dog fight.'

Combat Aircraft

U.S. Develops Fighter For the 21st Century

By Peter Middleton

-ONDON - For more than a decade, U.S. frontline fighters have enjoyed a technological, if not numerical, superiority over their Soviet counter-parts. Now, the Soviet Union has closed the performance gap and the United States is spending more than S5 billion on an eight-year program to develop the Advanced Tactical Fighter (ATF).

Designed to replace the McDonnell Douglas F-15 Eagle as the premier U.S. Air Force fighter from the mid-1990s and to remain in service for more than a quarter of a century. ATF will be an extremely agile, stealthy, supersonic air-combat vehicle with twice the range of the F-15.

ft will have a single pilot, but twin engines, probably featuring thrust-vector control to fa-

urfields and to enhance its combat maneuverability. Advanced radar, electro-optical sys-tems and missiles will allow it to engage multiple enemy targets simultaneously, well beyond visual range. It will also be a good close-in "dog fighter."

Page 9

Tuesday, June 16. 1987

The U.S. Air Force plans to buy 750 at a target unit price of \$35 million (at 1985 dollar rates).

Prototype development contracts were awarded last October to two U.S. industry teams - Lockheed/Boeing/General Dynamics (YF-22A) and Northrop/McDonnell Douglas (YF-23A). Each \$691 million contract covers construction of two aircraft, plus a ground-based avionics test vehicle.

First flights are set for the end of 1989. For the first time, the Department of Defense is demanding that competing contractors risk substantial sums of their own money on

Third World Competition on Rise

Shrinking Market, Costs Bring Shift in Fighter Production

By Kenneth R. Timmerman

ARIS — Two of the brightest stars of the Paris Air Show this year will undoubtedly be Europe's next generation fighters, the French Rafale and British EAP demonstrator, although neither aircraft will be mass-produced before the mid-1990s.

However, a long-term decrease in overall defense spending and higher unit prices per aircraft mean that European nations and the United States will be buying fewer fighters

tomotrow than the official states will be obylig fewer lighters tomotrow than they are today. Meanwhile, a growing number of Third World nations are expected to develop their own cheap fighters, thus increasing competition in a sbrinking market.

As many U.S. aerospace executives admit, the "boon times" of the massive Reagan defense buildup are over. As a result, the fighters under development today must be geared almost as strongly to the export market as to the needs of their own country's national defense.

"With the skyrocketing of R&D costs," said Aaron Karp, irector of arms trade research at the Stockholm International Peace Research Institute, "every aircraft has become an export aircraft. You simply have to get some money hack.

According to the World Military Aircraft Forecast of DMS, Inc., a U.S.-based defense market study group, Western and Third World countries will manufacture more than 10,000 fighter/attack aircraft over the next decade, worth an estimated \$205 billion (in 1985 dollars).

Non-Soviet fighter production will peak at 1,200 aircraft per year in 1988, according to the DMS study. After that, it will decrease steadily to a low of 930 aircraft per year in 1995.

runs could push it as high as \$50 million, as compared to the \$17.6 million of today's F-16.

Rapid advances in electronics is another. Fewer fighters will theoretically be needed to perform the same task, although opponents of high-tech weaponry claim that "fewer but better" makes each individual fighter a more valuable target, and, therefore, more subject to enemy attack.

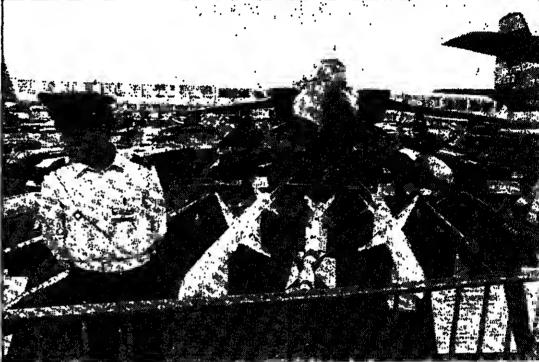

In response, many countries have opted to upgrade existing fighters rather than replace them. This is particularly true of the F-4 Phantom fleets of Israel, Japan and West Germany.

South Africa has chosen the same course with its aging Mirage-3s, which it cannot replace due to the 1977 United Nations embargo on arms sales to South Africa, Chile, Switzerland and Ecuador also are upgrading the avionics on their French-built Mirages.

"The overall effect of the shrinking market," said Mr. Karp. "is to force the aerospace companies to specialize in the production of one type of aircraft, instead of making

everything for everybody as they did before." According to DMS forecasts, the United States will build 6,497 of the 10,716 that will be produced by non-Soviet countries over the next 10 years, and it will face tough competition on many markets with European manufactur-

Most customers would prefer to buy U.S. combat air-craft. This is especially true in the Middle East. According to the Arms Control and Disarmament Agency, the region accounted for 55 percent of all arms sales to developing nations over the 1980-1983 period. But political quid pro quos have deterred many Third World countries from pleading their case before the U.S. Congress - an experience that left bitter memories in a country as pro-American

Planes line the tarmac at the opening of the Paris Air Show at Le Bourget.

cilitate operations from short, battle-damaged

Over the past two years, the defense agency has been studying several options for FSX. One is purely domestic development. Another is purchase of a foreign aircraft — the three possibilities under examination are General Dynamics' F-16 Fighting Falcon, McDonnell Douglas Aircraft's F/A-18 Homet, and the European consortium Panavia's Tornado. A third option is to postpone the decision by

Continued on page 10

The study said that, "The reduction ... is due also to the fact that most international future requirements do not anticipate a one-for-one replacement of older models with the newer designs."

The primary reason is that the fighters of tomorrow will

cost up to twice as much as today's in 1985 dollars. DMS forecasts that Dassault's Rafale will cost 40 percent more than a Mirage-2000, while the European Fighter Aircraft will run 42.8 percent more than today's Tornado. But the U.S. Air Force's Advanced Tactical Fighter (ATF) clearly wins the prize. Budgeted at \$32 million, cost over-

S a result, many developing nations have looked to

European manufacturers. However, as the cost of European fighters goes up, they may eventual-ly turn to half a dozen developing countries that have fledging combat aircraft industries. These new fighters, built by India, Indonesia, Brazil,

Israel, China and Taiwan, will cull a growing share of the

Third World market, which has a less pressing need for high technology than the West.

"What yon have is a segmented market," Mr. Karp said.

"At the top of the technology, only a few can compete. But everyone is pricing themselves off the export market. So you see developing a large second ner of mission specific airplanes, that will cost only half as much."

Actospace experts agree that it is much less expensive to develop a fighter capable of a single mission, such as ground attack, than to develop one that can do everything. However, the trend in Europe and the United States is

precisely to develop "multimission" fighters, capable of

everything from dogfights, bombing runs and high-altitude interception to ground-hugging troop support.

A plane such as the AMX, a specialized ground-attack aircraft built by a consortium of Italian and Brazilian companies, is expected to cost around \$10 million, compared to the \$29 million for the multimission F-15. No one expects the AMX, or other "cheap" aircraft, to

Competition Grows In Fighter Market

Continued from page 9

compare with the high-tech planes. However, they will compete with the comparably priced Dassault-Dornier Alpha jet or the British Aerospace Hawk, mitially designed as advanced jet trainers but recently upgraded to double as ground-attack planes.

Dassault, which has not taken any new export urders in more than a year, is clearly aware uf the danger posed by the new Third World producers. Over the past three years, Dassault executives have been trying to negotiate cooperation agreements with Brazil, Indonesia and India, hut so far without success.

"If we do not cooperate, the competitiun will simply get worse," a Dassault spokesman said. "But if we play the game, at least we get something. In the fu-ture, Dassault will be selling know-how as much as aircraft."

Japan is another potential competitor. It is committed to buying 100 Fighter Support Experimental aircraft, or FSX, in the 1990s. However, it is not yet clear whether it will agree with the United States to huild locally an upgraded F-16 or F-18, or whether Mitsubishi will opt for developing an all Japanese aircraft.

We hope that U.S. resistance [to selling Japan design technol-ogy] will keep them from making their uwn fighter," one European acrospace executive said. "Look what happened in the automobile industry. The risk is that they sell their own aircraft throughout the world at prices we can't beat. We must keep the Japanese off the market at any cost."

But the strongest competition on tomorrow's military aircraft market may come from China, which has already begun selling its Shenyang F-6 and F-7 fighters to both Iraq and Iran, where they have been "combat-proven."

Although the Shenyang fighters are copies of the MiG-19 and the MiG-21, the Chinese have reequipped them with more powerengines and a new avionics package bought from the West, Other export customers include Egypt, Pakistan, Albania, Bangladesh. Cambodia, Vietnam and Zimbabwe

DMS conservatively estimates that the Chinese will produce more than 300 F-7s over the next made by General Dynamics Corp. decade and 450 uf the fullow-ou of the United States

F-8, which is being developed with a \$550 million package of U.S. avionics recently approved by the U.S. Congress. Chinese officials said that, although the F-8 still looked like the MiG-23, "this is now primarily a Western aircraft." One advantage of the Chinese aircraft is their price. George Daningbok, an analyst

of Chinese affairs at the Parisbased Atlantic Institute, said the Chinese sold 100 F-7s to Egypt in December 1982 for a unit price of \$3 million. But last year, he said, the Chinese dropped the price to \$1 million in a sale of 50 F-7s to

This year, breaking with decades of secrecy, the Chinese aeronautics industry will be exhibiting its planes at an international air show for the first time. This will mark its cotry as a full-fledged competitor on the international aerospace market. And given the advantages of buying Chinese — iow cost, quick deliveries and a lack of political strings — it could also mark a significant increase in

Chinese export earnings. The biggest question mark in evaluating the future market for combat aircraft is the Soviet duction agreement.

Having carned a reputation for paranoia among their client states analysts, the MiG-29 simply can-DOL posting KGB guards to airbuilt in the West. In particular, at least the export version appears to lack a look-down, shoot-down rafields where Soviet-built planes were being kept, the Soviets have a

with a more modest approach. Their markets are much smaller than Indonesia's. In the case Meanwhile, both General Dycase-by-case basis, it would meet resistance from participants.

"This project is highly politicized. It is a matter of jobs, advanced technology and above all, European prestige," a British executive said

The U.S. Defense Department said in March that the United States would like to participate in the \$15 billion project, but ruled uut retaliation if U.S. companies were excluded. A key factor, in-dustry sources said, was fear of jeopardizing General Dynamics' proposal to replace F-16s in West-ern Europe with an advanced version currently being developed.

while U.S. participation in the AXEL KRAUSE is the economics project was not being ruled out correspondent for the International and would be considered on a . Herald Tribune,

Workers overhaul and test engines at a Singapore aircraft factory.

They said it was SAI's first venture into the manufacture of parts for commercial aircraft engines. The group is already making parts for military planes and engines produced by Gen-eral Electric and McDonnell Douglas of the United States, Turbomeca and Aerospatials of France and SIAI Marchetti of Italy.

Expanding Facilities

The value of aerospace components export-ed from Singapore to the United States rose from \$10 million in 1980 to about \$200 million last year.

illion, overseas sales are imperative if its We believe that in the next two years, our exports of engine and airframe parts to Europe will increase significantly," said Lim Lu Hock, Singapore has moved well beyond that stage. In an interview, Philip Yeo, chairman of the SAI's director of engineering.

In August 1981, a bilateral airworthiress ment was signed by the Singapore and U.S. governments. The agreement allows the Civil Aviation Authority of Singapore, CAAS, to approve manufactured parts and components for shipment to the United States without the need for further certification by the Federal Aviation. Administration. - Officials said that most of the aerospace facilities in Singapore were covered by this agreement, which amounts to a seal of approval by the

FAA of local manufacturing standards. More than 40 firms offer a wide range of specialized aviation services in Singapore. At least 10 are subsidiaries of, or joint ventures with, leading multinational aircraft equipment companies. Much of the aerospace industry is in a specially designated industrial estate spread out over 460 acres (about 187 hectares). It is only about a five-minute drive from Singa-pore's Changi International Airport.

Sundstrand Pacific Pte Ltd. is one of the largest private sector aerospace undertakings in Singapore. Enlarged in several stages since 1976, the plant manufactures shafts, gears and other parts used in making constant speed drives, gear boxes and starting systems for P-16 fighter-bombers and most major commercial aircraft. It also repairs and services con-stant speed drives and inflight equipment.

UNDSTRAND Pacific is a whollyowned subsidiary of Sundstrand Corp., a leading U.S. acrospace conglomerate headquartered in Rockford, Illinois. The group bas 36 manufacturing facilities worldwide and employs more than 16,000

would be announced later this month or in

Mr. Habibie, who trained as an aeron engineer in West Germany and is a former director for technology application at Messer-schmitt-Bolkow-Blohm, MBB, is the driving force behind IPTN. He is a close friend of President Suharto and serves as Indonesia's minister of research and technology.

He has been criticized in Indonesia for allegedly taking the country down a path which it can no longer afford. Critics, including a num-ber of economists, contend that establishment of Mr. Habibic's high-tech empire has absorbed huge amounts of government subsidies at the expense of other more important areas of the economy. They say that the aircraft indus-try is unprofitable and likely to remain so for many years. -.

They also argue that Indonesia lacks the technical manpower base for a successful air-craft manufacturing enterprise. They say that foreign advisers, machinery and virtually all the raw materials at IPTN are imported.

The critics point out that of about 250 aircraft produced by the plant, nearly all have been sold domestically to a captive market, mainly to state-owned enterprises. Of eight aircraft sold abroad to Guam, Saudi Arabia and Thailand, only two were built by IPTN. The other six, they say, were largely manufac-tured at the licensers' plants overseas.

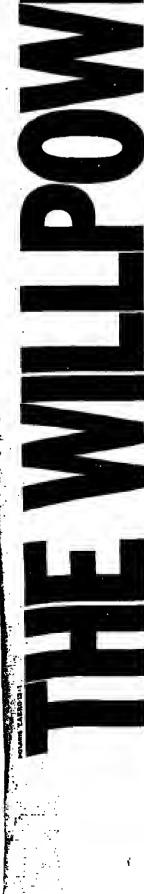

They also note that while the FAA certified the CN-235 as airworthy last December, its seal of approval applied only to planes assem-bled at the CASA plant in Spain. Mr. Habibie insisted that IPTN has been

providing the government a return on equity at an average of 5.7 percent a year. He said critics should also consider the advantages to the nation from acquisition of high-technology skills in key sectors of the economy and from about 200 Indonesians being trained abroad each year on IPTN scholarships.

IPTN is planning a joint undertaking with Boeing, MBB and Fokker of the Netherlands to build a medium-sized jet called the Atra-90. Mr. Habibic said he sees the plane as a replacement for the large fleet of DC-9s serving Indonesian domestic air roptes. They are due to be phased out of service b

ug U.S. military Skyhawk jets and C-130 Hercules transports and is seeking further foreign contract work.

SAPs civilian involvement is growing. The group recently announced it had agreed to pay percent of the development cost to become a partner in the production program for the new Pratt & Whitney PW-4000 turbofan engine. The engine is designed for wide-bedy aircraft such as the Boeing-747, Boeing-767, Airbus-310 and McDoanell Douglas-11. The PW-4000. is scheduled to begin service later this year.

Other companies that have taken a small stake in the project are Japan's Kawasaki Heavy Industries, South Korea's Samsung Precision Industries, Italy's Fiat Aviazione, Norway's Vaapenfabrikk, Belgiom's Fahrique Nationale and the Netherland's Eldim. SIA will be the sole manufacturer of seven high-p sure compressor parts for the PW-4000. Offi-cials said that deliveries would begin early next ycar.

people. Its Singapore operation is the corpora-tion's only manufacturing plant in Asia and is the center of its Asian operations.

Indonesia's acrospace industry is focused on a state-owned aircraft company, Industri Pesawat Terban Nusantara, IPTN. Started in 1976 with a work force of 500, it now employs 13,000 people. IPTN is involved in production of six types of aircraft. Four of them are French, West German and U.S. belicopters made under license.

Two are fixed-wing aircraft. The NC-212 is manufactured under license from CASA of Spain. The CN-212, a 40-seat plane that can carry cargo or passengers for civil or military use, has been designed and built under an equal partnership agreement with CASA Bacharuddin J. Habibie, president of IPTN, said in May that the CN-235 and the Frenchbuilt ATR-42 were the two remaining contenders in a shortlist for a French Air Force tender to buy up to 20 planes. He said the winner

1990s. Mr. Habibic argued that the fact that three leading U.S. and European aircraft man-'ufacturers are interested in a joint venture with IPTN is a vindication of its activities.

In Malaysia, the government privatized the maintenance arm of the Royal Malaysian Air Force to form a joint venture company, AIROD Sendirian Berhad, in January 1985. The Malaysian government, through Aero-space Industries Malaysia, has a 30 percent hare in AIROD. The remaining 70 percent is held hy Lockheed Aircraft Services International of the United States.

Early this year, AIROD was designated as an authorized service center for Lockheed C-130 transport planes and L-100 commercial jetliners.

MICHAEL RICHARDSON is the Sou Asia correspondent for the International Herald Tribune.

Japan Hoping to Get Its Own Warplane

In practice, co-

two meanings.

development has

upgrading an existing aircraft in the Japanese Air Force, such as the F-4 Phantom or the F-15

Eagle, to use in the interim. Last year, U.S. officials quietly pushed a compromise option — co-development. Ideally, this would mean that foreign and Japanese firms would jointly design and produce a new aircraft

Japanese officials have accepted the concept, but in practice, co-development has a different meaning for the two sides. American firms interpret it as producing an advanced variant of their existing aircraft — what Mo-Donnell calls a Super Hornet — which would, at most, incorporate some Japanese technology. Japanese industry thinks it means a domestically designed plane using some foreign parts, such as the engine, which they acknowledge they cannot produce by themselves.

"As long as we have the final responsibility for the project and final control, we will he bappy to cooperate with the U.S., Europe or anybody in the project," MHI's Mr. Sasaki said. "It must be our responsibility."

Japanese industry, led hy MHI, has strong support from within the defense agency, including from the Air Self-Defense Force. Industry's desire to become competitive with the more advanced aerospace firms of the United States and Europe is complemented by the government's long-standing policy of encouraging domestic sources for major arms. About 80 percent of Japan's military equipment needs are produced at home, although many of them are foreign weapons made under license.

The aerospace industry is particularly dependent on defense contracts, around 80 percent, for its sales. Currently, Japanese firms produce the sophisticated F-15 interceptor under license from McDonnell (and the F-4 before that), the Lockheed P-30 Orion anti-submarine patrol plane, and many other weapons such as guided missiles.

The domestic industry is necessary, Japanese industry and government officials say, to provide the engineering skills and logistical base. In a crisis, Jápan cannot depend on the United States for a flow of spare parts and ammunition. "We need to have an engineering force with a high level of technical capability 10 support the JDA's aircraft," Mr. Sasaki said.

Foreign companies contend that Japan is gearing up instead to compete internationally. The Japanese government has a well-estab-lisbed policy of barring exports of military equipment abroad, a consequence of Japan's anti-war constitution. But Japanese defense manufacturers have spoken out publicly in favor of removing that restriction.

"A substantial proportion of Japanese equipment suppliers feel a powerful drive to enter world export markets," a recent study of the Japanese defense industry by the Jardine Fleming investment firm said. "Notwithstanding current restrictions, it would be rash to assume that they could not compete effectively in world markets in, say, rather over a decade's time.

Mr. Sasaki replied that Japanese industry is only interested in small-scale domestic pro-

jects, a description he applies to the FSX. "We have no interest in exporting the FSX or spinoff products overseas."

The MHI-led consortium and the three foreign firms made their final proposals to the Japan Defense Agency in meetings in Tokyo in April. The Japanese design envisions a twinengine supersonic fighter, equipped with newly developed radar, computer systems and fly-by-wire CCV (control configured flight) technol-ogy. They will use advanced lightweight car-bon-fiber composite materials to form the plane's wings. They claim to be able to develop the plane for about \$1 billion, with a total cost of \$6.5 billion (about \$38 million per plane).

U.S. defense officials challenge the cost claims. A Pentagon study team, officials said, believes such a new aircraft cannot be devaloped for less than \$2 billion to \$3 billion. They estimate total cost for research and development and production at around \$12.5 billion.

"It is going to cost them a lot of money," an official of McDonnell Douglas said, "and they are not going to end up with anything they couldn't have gotten cheaper." The Japan Defense Agency is scheduled to

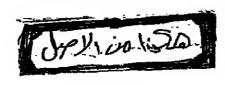

make its decision this summer in its preparation of its proposed budget for next fiscal year. U.S. industry and defense officials are pessimistic about their chances given the powerful lobby in favor of domestic production. "It's just a matter of time — they're all gearing up for it," the McDonnell official said.

Still, the officials observe, U.S. government pressure could still have an impact on the decision. Defense Secretary Caspar W. Weinberger is scheduled to visit Japan at the end of this month and the FSX is expected to be on his agenda.

mic production rates

The air force has scaled back

U.S. Procurement una Cono Pentagon Confronts a Shrinking Budget replacement for the General Dy-replacement for the General Dy-The navy has red planned McDonnell Dy-B Harrier rate so muc

The U.S. armed services, faced with a third straight year of the budget contractions, are tying to maintain their most important aircraft production programs and advance development work on planes they are counting a for the future.

For the air force, this means aying General Dynamics F-16 ad MeDonnell Douglas F-15 thters at rates considerably lowthan had been planned in recent fairs. It means potting fewer airuse longer before they are reared. And it puts pressure on the Service to keep on track its devel-opment of the Advanced Tactical righter (ATF) and the engine and avionics systems needed for it.

As the air force moves toward Advanced Technology Bomber Advanced Technology Bomber (ATB), the so-called Stealth omber, it faces the unwelcome pab of making its in-production pomber, the B-1B, as capable as it was supposed to be. A new transport aircraft, the McDonnell Douglas C-17. also is in develop-

The navy, with more aircraft production lines to preserve, cut back a number of its programs last winter as the Defense Department prepared budget requests for fiscal year 1988, which begins Oct. 1. The navy has shuffled its plans

further since then. The big development programs it is protecting are the Advanced Tactical Aircraft (ATA), a medium attack

The air force is taking lowcost approaches in programs that critics say are short-changed routinely in favor of fighter forces.

plane that is fully as secret as the ATB, and the V-22, a till rotor it pays more per aircraft. aircraft for use initially as a Ma-

rine Corps assault plane. The army, with the smallest aviboth of its bread-and-butter tactical aircraft programs in this way. ation program among the three services, made perhaps the most difficult decision in the fiscal year 1988 aircraft budgets — to end Only a few years ago, it planned procurement of 216 F-16s and 60 F-15s each year into the 1990s. Now, the F-16 is to be built at 180 production of the MeDonnell Douglas AH-64 attack helicopter per year through 1992 and drop off to 120 per year after that.

early, after next year's buy. The army also moved to reduce the production rate of Sikorsky F-15 production will be held to 42 per year until the program gives way to ATF in the mid-1990s. F-UH-60 utility belicopters and to end a Bell Helicopter Textron pro-16s and F-15s manufactured during the 1990s will be powered by gram to improve OH-58 scout hehigher-thrust versions of the curicopters. But the army has strugrent General Electric F110 and gled in its attempts to get started on an LHX (Light Hebcopter Ex-Pratt & Whitney F100-220 enperimental) program to develop a 1990s replacement for AH-1, UH-

The air force and the navy have agreed to develop their new, most capable aircraft so that each is and other aging small helicop-This year's U.S. defense budget adaptable to the other's needs. Thus, an ATF variant is to be is down by about 7 percent, after allowing for inflation, below that available when the navy decides to of two years ago, and the FY 1988 replace the Grumman F-14 as its budget, currently before the Concarrier-based air superiority airgress, is likely to shrink as well. But as the Pentagon moves to lowcraft. And the air force will look to an ATA derivative as an eventual

tion aircraft.

The air force is taking low-cost approaches in a couple of programs that critics say are shortchanged routinely in favor of fighter forces:

• To modernize continental air defense interceptor forces, the air force decided last year to modify 270 of its older F-16s instead of buying new F-16s or Northrop F-20s. Losing this competition led Northrop to end the F-20 program for lack of sales. The air defense Flos will get improved radars and communications equipment and will be adapted to launch radarguided anti-aircraft missiles. Although the five-year modification program is said 10 be much less expensive than new aircraft, the Etos taken from tactical forces for modification will be replaced by

new, more modern F-16s. LTV will prototype and demonstrate improvements for its A-7 attack aircraft, including a modern engine, configuration changes, a low altitude/night attack system and other avionics upgrades. The idea is in avoid more expensive alternatives — an F-16 adaptation or a new aircraft — for elose air support of ground forces. The navy bas cut back on its

planned aircraft production rates in recent years, and this continues. Procurement of the McDonnell Douglas F/A-18 strike fighter, a "swing" aircraft that can fly air superiority or attack missions able from aircraft carriers, was in bave

been increased past 100 per year but now is planned at no more Boeing Vertol for a first flight in than 72, less than the current rate.

The navy has reduced its planned McDonnell Douglas AV-8B Harrier rate so much, down to 15 per year starting in 1990, that one congressional committee wants to drop the program altogether. Plans to acquire an improved version of the F-14 have been

changed. Instead of producing all of the aircraft from scratch, the navy will get most of them by modifying existing F 14s. Grumman will build the new planes but will have to compete for the modification program. Instead of developing a new electronic warfare aircraft, the navy will modify Lockheed S-3s. Some of the navy's replanning reflects a decision to change dra-

matically the mix of aircraft on aircraft carriers. Taking advantage of the two-mission capability of the F/A-18, the navy intends to decrease the numbers of F-14s and F/A-18s in a typical carrier airwing from 24 m 20 each, reducing but not compromising air superi ority. With these and other freedup dock spaces, it will double the number of Grumman A-6 medium attack aircraft, from 10 to 20, greatly increasing the airwing's firepower.

The changes will be phased in. beginning next year. Procurement of the A-6E and an improved model, the A-6F, will not increase as much as the airwing changes would indicate, because A-6s will be replaced one-for-one by ATAs as the new aircraft becomes avail-The V-22, in development by Bell Helicopter Textron and

development - bence the forma-tion of industrial teams to spread the load.

With the incentive of production contracts potentially worth more than \$25 billion, industry is prepared to take that risk, even though only one airframe will go into full-scale development and production, following a competitive fly-off. Both General Electric and Pratt & Whitney are developing high-technology ATF engines. The U.S. Navy is now showing interest in the potential of ATE as a turn-of-the-century, carrierborne fighter, while pursuing par-allel plans for a stealthy 1990s subsonic attack aircraft that could be the subject of a reciprocal U.S. Air

Force purchase. Last July, the Soviet Union fielded a formation of MiG-29 Fulcrum fighters at a Finnish air display, heralding the export of what the Pentagon described as a "highly capable" middleweight combat aircraft. Fulcrum is now in service with Iraq and India as well as with Soviet tactical forces, which already have more than 300, according to the Pentagon.

production) to the bigger swing wing Backfire, which is described by the Pentagon as "formidable" in the European and Asian con-text. About 160 are in service, and about 30 are being built each year. Even the old Bear turboprop is back in production, but now carries AS-15 cruise missiles that will also be among the weapons options for the Blackjack strategic bomber. This Rockwell B-IB look-alike is being flight-tested for possible entry into service next

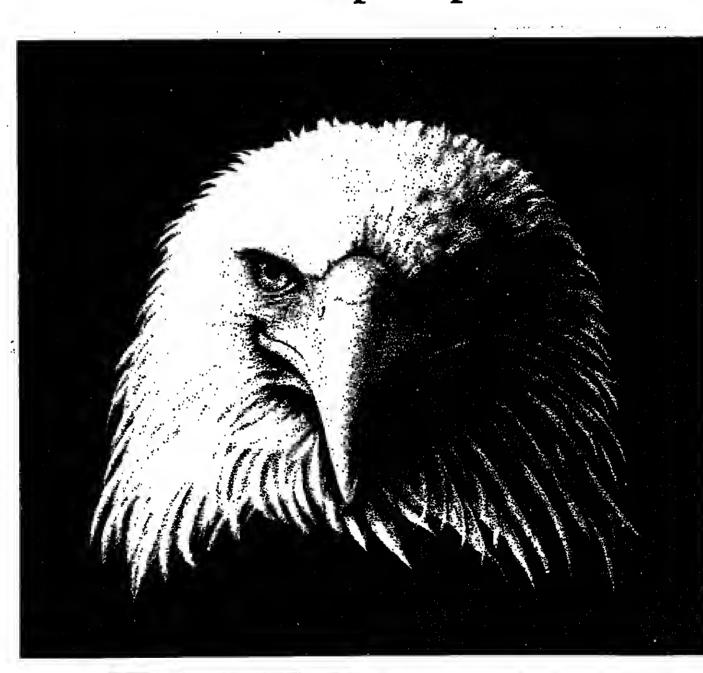

Besides the classic fighter attributes of manenverability, firepow-er and speed, the ATF design will stress two less obvious features in its bid to reaffirm Western air superiority - stealth and reliability -both of which will exploit U.S.

technological advances. TEALTH is the art of reducing the chances of an enemy seeing you on ra-dar or by electro-optical means - usually intrared - be-

fore you see him. A high-tech extension of camouflage, stealth will be achieved in part by blending the aircraft into as smooth and unified a shape as possible, commensurate with othdesign objectives. This will help Future generations deserve nothing less than America's continued

leadership in space.

program review in November.

correspondent of Aerospace Daily.

Fulcrum poses a performance challenge to the most capable Western fighters in its class - the General Dynamics F-16 Fighting Faicon and the McDonnell Douglas F-18 Homet.

Dominance of the heavyweight, air-combat arena by the U.S. Air Force F-15 and the U.S. Navy's Grumman F-14 Tomcat is also threatened by the final emergence of the Sukhoi Su-27 Flanker.

Flanker now incorporates many F-15 features, particularly around the rear fuselage, where major acrodynamic drag problems had been encountered. The Pentagon says that the Soviets have begin deploying Flanker both to strategie and home defense forces.

Another Soviet "heavy metal" fighter - the MiG-31 Foxhound - is also in production. More than 150 have been deployed for home air defense, according to the

Pentagon. Foxhound was developed in parallel with Flanker, possibly as an insurance against failure of the more radical Sukhoi design. It is a major redesign of the Foxbat interceptor/reconnaissance aircraft, which, despite its great speed (tri-sonic at high altitude), is useless for air combat because of poor maneuverability.

All three new Soviet fighters have state-of-the-art aerodynamics, big radars and advanced new missiles. The Pentagon credits all three with "look-down, shootdown" capability against low-fly-ing attack aircraft. This means that their radars and missiles can discriminate between targets and the background elutter of the surface over which they are flying.

While Foxhound is optimized for the interception of Western strike aircraft, such as the F-111, Tornado and B-1B, with new longrange (80 miles) missiles, both Fulcrum and Flanker represent a significant tactical air-combat threat. They are greatly superior in MiG-23 Floggers, which, in Libyan hands, have been trounced by U.S. Navy Tomcats.

"Strategic aviation is making a strong comeback in the Soviet Union," the Pentagon says. Besides maintaining superiority over the new Soviet fighters, and their successors, in any conflict, ATF would also have to deal with various attack aircraft.

Known types range from 400 obsolete Badgers and obsolescent Blinders, through the swing-wing Fencer in the F-111 class (450 have been built and it is still in

to disperse radar beams rather than reflect them back to searching enemy radar.

Fiber-reinforced plastic composite structures, which are chosen for their light weight and high strength, will also play a major stealth role because they are poor radar reflectors. Air-intake design will also be critical. Today's typi-cal square-cut shapes can act like the radar-reflection augmentors that sailors fit to their yachts.

Furthermore, ATF engines will be so powerful that supersonic cruise and most combat mancuvering will be performed without need for afterburner and its heightened infrared signature. This also minimizes fuel consumption to help ATF achieve twice the combat radius and endurance of the F-15, enabling it to engage enemy fighters over their own territory.

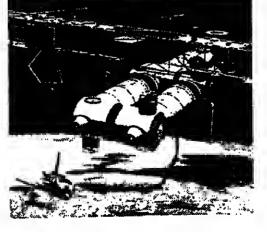

Reliability also helps to maxi-mize air combat time per dollar. The U.S. Air Force specification calls for ATF to be twice as reliable as the F-16 and to have drastically reduced demands on spare parts and external electronic test equipment. Currently, a fully loaded C-141 jet freighter is need ed to support every dozen F-15s deployed away from base. ATF must also be tolerant to battle damage.

The key reliability technology is VHSIC (very high-speed integrat-ed circuitry) which was developed in the United States to pack 100 times more digital computing power on in a chip than convennonal micro-electronics.

Not only do these VHSIC chips promise great reliability, but idea-tical "common module" VHSIC circuits will be fitted to different ATF electronic subsystems, further reducing requirements for

VHSIC computing power will enable distributed processing to be undertaken within radar, navigation, electronic warfare and flight-control systems, thus reducing the need for central comput-ers, which are vulnerable to battle damage enable ATF flight controls to be "self repairing," that is, if elements are disabled, the remainder will work out how to fly the aircraft and indicate to the pilot what missions can still be undertaken:

PETER MIDDLETON is asso ciate editor of Flight International magazine.

Since its inception, NASA has led America to the high ground in space through the combination of vision and high technology.

The benefits of space technology have made remarkable contributions to the quality of life for us all.

To continue to derive the maximum benefits of new technology, America needs to expand its exploration of space through a commitment to the next critical step-the Space Station. Future generations deserve nothing less.

ASHINGTON -If you are fuming over a possible missed flight while stymied in a treffic jam on the Brooklyn-Queens Expressway to New York's John F. Kennedy Airport, the autoroute to Orly in Paris, or the M4 to Heathrow in London, take heart. Your plane is probably just as delayed. This a fact of modern life.

The public is flying more, and everyone wants to arrive in the moming and return home hy nightfall. Add to that the limited capacity of most major airports, the increasing strain on archaic air traffic control systems plus airport distances requiring longer surface jousts than scheduled air times, and you have a reason for discontent.

By 1995, New York City airports are anticipating a 40 percent increase over the current 78 million passengers, a situation regarded by one industry observer as "a prescription for cha-

One solution to this problem lies in the tilttotor, an aircraft combining helicopter maneuverability and airplane cruise speeds and range. This vehicle can span distances such as those between London and Paris at 350 miles (564 kilometers) an hour and land vertically at a city-center heliport, eliminating highway snarls and crowded airport terminals.

Such an aircraft is part of a \$2.5 billion joint U.S. venture between Bell Helicopter Textron and Boeing Vertol Company, Known as the V-22 Osprey, the full-scale development now in progress for the army, navy, air force and marines will be the world's first production --

versus experimental — till-rotor. Scheduled for its inaugural flight by Febru-ary 1988, initial military deliveries are expected

The aircraft can stand poised in a space no larger than an average parking lot. With two sets of 38-foot (11.5-meter) diameter, jetpowered propellers facing skyward, it will take off venically like a helicopter. Then, after accelerating into horizontal flight, it will ult its engine pods forward 90 degrees and travel skyward as a propjet. The aircraft can climb to 30,000 feet 19,150 meterst and cruise at well over 300 miles an hour.

Once at its desunation, the engines will begin their reverse rotation and the craft will land gently. Quieter than a helicopter and equally maneuverable, the tilt-rotor's payload, range, speed and economy rival that of a turhoprop airliner.

This "heliplane" draws on about 50 years of experimentation together with Bell's experience on a similar, proof-of-concept, tilt-rotor known as the XV-15, a research aircraft that Bell has been flying for the last 10 years.

The tilt-rotor will take off vertically and cruise at over 300 miles per hour.

The V-22 production version has only recently hecome an economic reality, thanks to an amalgam of emerging technologies, such as complete computer aided design, non-metallic, composite materials and construction techiques, such as those used in the globe-circling Rutan Voyager, fuel-efficient turbine engine development, electronic flight control systems and associated aerodynamic advances,

Fifty-seven feet long and weighing 40,000 pounds (18,182 kilograms), the 24-troop V-22

New York City airports are anticipating a 40 percent increase in traffic.

is a purely military venture. It is intended to replace fleets of old-technology helicopters no longer capable of meeting the needs of modern warfare. Because of the multibillion-dollar de-velopment funding necessary, an initial military market was the only practical route.

Once production is ready, however, the price per unit based on the 1,200 ordered under a joint services contract will be approximately 6 million each.

This figure broaches the possibility of a commercial V-22. Such a civilian craft would probably be slightly more expensive due to smaller production volumes and the need for a pressurized cabin. Would a \$16 million. 44-seat commuter aircraft have market viability? Necessarily high fares, possibly double current short-haul rates, might curb passenger popularity.

Program chiefs at the National Aeronautic and Space Administration investigating a civilian tilt-rotor argue that, as with Concorde, time saving is a more critical business requirement than ticket saving.

Bell says a civilian version of the V-22 with a pressurized cabin and 36 to 44 seats would weigh about 44,000 pounds, have a range of 750 miles, cruise at 350 mph and could be flying by 1995. Such an intercity commuter plane could cut average travel time by one-third to a half. NASA officials say. It is estimated that 50 percent to 70 percent

of most airport travelers are moving less than 500 miles, an ideal range for the intercity tiltrotor. A 44-seat commuter version would relieve airport and highway congestion by diven-ing a high percentage of air traffic from major

Helicopters, for example, can only fly routes economically that are less than 50 miles to 75 miles long. They cannot provide the load capacity, range, speed, comfort level or fuel effi-ciency demanded in the intercity market. The till-rotor opens the possibility of air

transportation to deep-water oil rigs, smaller cities and towns without resources for capitalintensive airports, as well as to mountain vacation areas.

Europeans are equally enthusiastic. The European Future Advanced Rotorcraft (Eurofar), a five-nation cooperative involving seven man-ufacturers, is conducting a 550 million design investigation on the feasibility of a European commercial ult-rotor by the year 2000. Although Eurofar will be playing catch-up to the Bell-Boeing development, the effort underlines the importance of the tilt-rotor in answering a crucial future air travel need worldwide.

MARK PATIKY is a Washington-based journalist specializing in the aerospace industry and science technology

Ariane Leads the Way to Maturity

By Kenneth R. Timmerman

ARIS - "The European Space Agencv is a little brother that has grown up," said Jean-Jacques Dordain, a top ESA official. From its infancy 20 years ago, Europe has grown into a mature and inventive space power. Today, Mr. Dordain said, the European space industry has come up to the same technological level as that of the United States and

the Soviet Union. "even if we aren't that big." In 1985, ESA members decided on an ambiuous suite of projects. Not happy to become mere passengers aboard the space shuttle of the National Aeronautics and Space Adminis-Iration or guest scientisis aboard the U.S. space station, the Europeans decided to build their own shuttle, the Hermes, and an orbital platform, the Columbus, as well as a more powerful rocket to send them aloft.

The three projects, costing \$5.4 billion, should become skyborne in the mid-1990s, bringing Europe into the era of manned space

flight. The European space program bad a hard time getting started. Its first joint rocket project, Europa-1, went through nine successive launch failures before it was finally abandoned in 1969, while the budget bickering that ensued nearly doomed space cooperation altogether. Although France launched a national satel-

lite in 1965, and Sweden began using surplus Nike and Orion sounding rockets to launch scientific payloads into near space a year later, no European country could muster the finances necessary to pursue a major space program alone.

As a result, in 1973, 11 countries - Belgium, Britain, Denmark, France, West Germany, Ireland, Italy, the Netherlands, Spain, Sweden and Switzerland — founded the European Space Agency. The members decided to limit their efforts to unmanned space flight - telecommunications satellites and especially the Ariane Jaunch vehicle.

As the ESA spokesman, Jean-Paul Paillé, said, "We were never looking to put a man on the moon.

The ESA decision paid off. Despite two recent launch failures, the Ariane rocket has become a commercial success and is booked through 1990. The current backlog of 46 firm satellite launch contracts is worth 14.9 billion French francs (\$2.5 billion).

Twenty-two launch reservations have been recorded since January 1986. However, Arianespace's international sales director, Klaus Iserland, said that the explosion of the U.S. shuttle Challenger in January 1986 "bas not altered our market position; today we have 50 percent of the commercial satellite market in the West, and this bas been the case for the past three years."

As a result, Arianespace, the private venture set up to manage the launch business, has become a money-making venture, only eight years after its first successful launch. Not only did Arianespace finish paying off Ariane development costs last September, it has also branched out into the lucrative - and risky space insurance business with a wholly owned subsidiary company, S3R. Ariane flights have been suspended since an

Drawing of the Hermes space plane docking with an orbiting station.

ignition failure in the third-stage engines caused the 18th flight to abort in May 1986. The next flight was scheduled for February, but tests of a redesigned third-stage engine uncovered an overheating problem in the fuel pump and are expected to delay the 19th flight until late August or early September.

Despite the additional delay, Ariane production continues at a rate of eight launches per year, and the larger capacity Ariane-4 is sched-uled to make its first flight early next year. If all goes well, Ariane will make eight commer cial launches in 1988, nine in 1989, and nine in 1990.

Frederic d'Allest, the chairman of Arianespace, said that there can be no doubt that Europe has come of age.

"Today, Ariane is the first commercial launcher in the world, SPOT is the best commercial earth observation satellite, and we have no complexes about becoming a power capable of launching its own space station," he said

Ariane's success has opened up new horizons for the European space industry, which no longer sees itself as merely an adjunct to NASA. As the growing plethora of communications satellites shows, the commercialization

of space has already begun. "But space is not just a commercial venture," Mr. D'Allest pointed out. "It is also a technological exploit."

Among other European high-tech exploits is "hypersonic" aircraft currently under development in both Britain and France. British Aerospace and Rolls-Royce have joined forces to propose what they call a revolutionary new rocket engine that will allow a commercial airliner to take off from existing airports and then enter near-Earth orbit, accelerating to speeds approaching 10 times the speed of sound.

A similar project is being explored by a secret design team of 20 researchers at Aérospatiale in France. Dubbed the avion de grande vitesse, or high-speed aircraft, the Aerospatiale project is unique because its highly efficient ramjet will generate enough thrust to develop speeds of Mach 5, more than 3,100 miles per hour (5,000 kilometers per hour) while remaining within the Earth's atmosphere. By thus avoiding the weightlessness of outer space, the plane promises greater passenger comfort and lower cost than its future trans-atmospheric competitors.

As with the Ariane rocket, neither Britain nor France can afford to develop a hypersonic commercial airliner alone. But their advanced research into aerodynamics and new propulsion systems could be pooled later into a joint development program.

The hypersonic planes are not expected to fly before 2015. In the meantime, the French are continuing to work on a followup to Con-corde that will fly at 2.200 kilometers per hour (Mach 2.2).

An Aerospatiale spokesman said that although this supersonic transporter will use "basically the same technology as exists today, it will be much larger than Concorde and carry up to 300 passengers, with a range of \$,000 to 10.000 kilometers.

Today, European space technology has ad-vanced to such an extent that the Europeans now rival their American counterparts in certain fields. Communications satellites from France and Sweden have begun to compete on the Third World market.

Even in photo reconnaissance and spy satellites, an area of long-standing weakness, the

Europeans are beginning to catch up. After years of hesitation, the French recently decided to build their own military observation satellite, widely believed to be an upgraded version of the commercial SPOT satellite. In Britain, a top-secret program to build a listening satellite stationed over the Sovier Union was revealed by the British Broadcast-

g Corporation. The British project, called Zircon, will cost upward of £400 million (\$640 million) and may

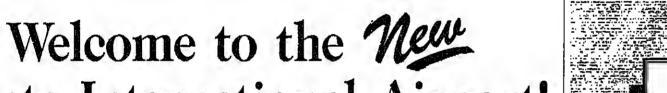

go aloft next year. According to a BBC program that was banned from the air in January. Zircon will be disguised as one of Britain's Skynet military communications satellites and will be capable of intercepting telephone and radio communications inside the Soviet Union and beaming them back to ground-based receiving stations - a capability long available to the United States.

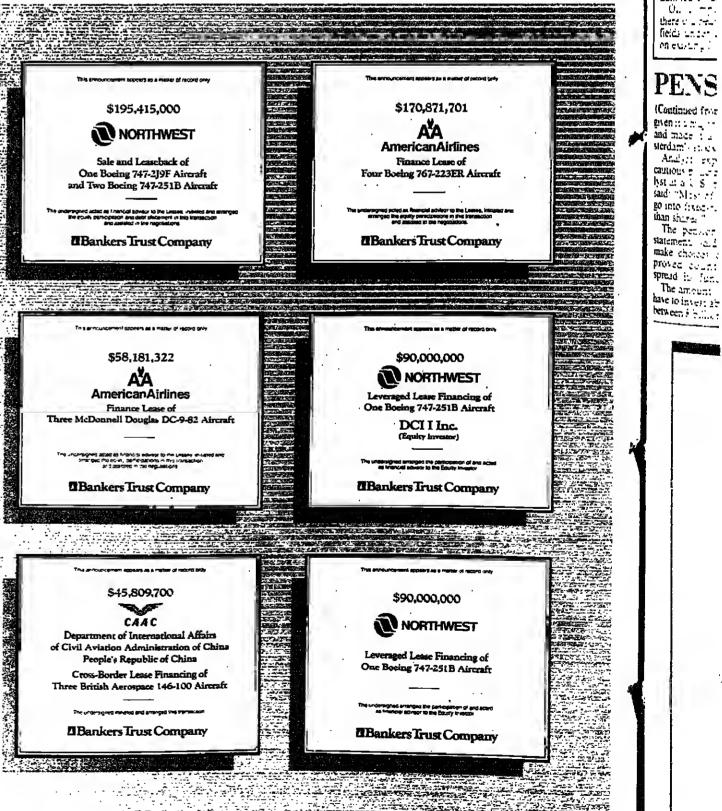

Europe's commercial satellite business will also get a boost once the Columbus space station is launched near the end of the century. Aerospace executives in France, Britain, West Germany and Sweden are already looking forward to the day when strings of European-made satellites, tethered on ultra-strong composite threads as fine as a spider's web, will follow Columbus around on Earth orbit. "Tethering" the satellites means they can be

serviced while in orbit, thus prolonging their

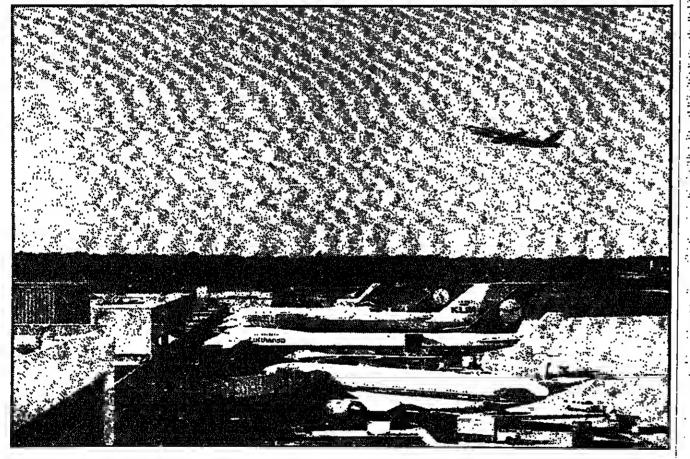

Mr. Dordain of ESA believes that Columbus will open up a new field in the not-so-distant future: that of commercial space production. New alloys, vaccines, crystals and other prod-ucts difficult to manufacture on Earth corld be made in space, using totally automated pro-duction modules stationed in permanent Earth orbit

INVERNATIONAL STOCK MARKETS

Thatcher's Coattails Carry London Index Past 2,300

By WARREN CETLER

mal Herald Tribuna

ONDON --- British share prices, ignited by the Conservative Party's resounding election victory last week, reached new heights on Monday, pushing the Financial Times-Stock Exchange index of 100 leading shares past 2,300 , for the first time. Many analysts expect the 2,400 barrier to fall

theat as international demand grows for pound-denominated The index, which jumped a dramatic 40.2 points on Friday,

gained another 18.1 points on Monday to finish at 2.307.6. The index began 1987 at 1,679, and bas climbed 37 percent so

London is still the

European investors.'

most important

market for

a far this year. Only the Nikkei average in Tokyo, up about 35 percent since Jan. 1, has come close to matching gains on the British market among major international centers.

"Our short-term target for the FT-SE 100 is 2,400, or up about 5 percent from current ievels," said Bob Semple, equity-market forecaster for the brokerage firm Wood Mackenzie & Co.

"Overseas interest will continue in the form of a steady increase, rather than a sudden surge," he said.

Sbares in London have been risen on the back of strong economic fundamentals. These point to annual growth of 3 percent or more in 1987, expected to he the fastest expansion among the West's seven major economies. Inflation is forecast to stay at around 4 percent.

Also bolstering shares has been a strong surge in corporate earnings, frequently exceeding market expectations

According to many analysts, earnings of major corporations listed on the exchange are showing an average increase of 16 to 17 percent from last year, compared with increases of about 8 percent at the same time last year.

Michael Zapf. European equity analyst with Bonl. in Liechtenstein's London unit, said London is "still the most important European market for investors,

"You have earnings growth, and the downtrend in interest rates has not been broken," he said. "It's a very simple earnings-and-growth-oriven situation and you don't have that on the Continent.

OREIGN INVESTORS' appeute for British stocks will be whatted. Mr. Semple and others said, by expectations of several cuts in Britain's base lending rate over the next few months. The rate is now at 9 percent. The Bank of England is believed to be prepared to sanction

such cuts during summer as a way of easing upward pressure on the proceed particularly against the Deutsche mark, and thereby help mapiove exports. Many market watchers believe the first cut could come as early as next week.

Max Hoepfl, a director of Robert Fleming Investment Manusement Lid. in London, said, "We're maintaining an overweighted position in U.K. equities in terms of our global portfolicy. Out total exposure to U.K. equities, as of end-March, was \$15 billion, compared with \$10 billion at the end of December,

"The most worrying aspect," he added, "and the thing that would make us cut back on our U.K. exposure, is any major strengthering of the pound against the Deutsche mark." Ine price-carnings multiple of British corporations still makes

investment in them attractive, Mr. Hoepfl said. The average P/E ratio on the Londoo Stock Exchange is now 14 to 15, he said, compared with 18 in New York and 55 to 60 in Tokyo, "London still looks fairly cheap, the P/E is definitely not controversial." he said.

The relatively low ratio has been a factor behind unprecedented volumes of trading in London, as have a host of denationalization issues over the past 12 months, analysts said. The companies See STOCKS, Page 19

Hit Snag **Friction Centers** On Scope of Link

SAS Talks

**

Sabena,

By Juris Kaza al Herold Tribune STOCKHOLM - Talks aimed at merging the flight operations of Scandinavian Airlines System and Sabena Belgian World Airlines are foundering because of sharp disagreement over what businesses should be combined, according to sources close to both airlines.

The source of the friction, re ports said, was the desire of SAS's chairman for greater concessions than Sabena is willing to give.

After a round of weekend negotiations, a Sabena spokesman em-phasized that the Belgian airline was interested only in a possible merger of air transport operations. The statement indirectly confirmed reports that Sabena executives were annoyed by a statement by Jan Carlzon, president of SAS,

that he wanted to merge all operaulons of the two airlines, including hotels and catering services. SAS and Sabena are both rough-

ly half state-owned. The governments of Denmark, Norway, and Sweden share ownership of SAS with private interests through a complicated arrangement involv-

ing national holding companies. Ken Oberman, senior vice presi-dent at Oppenheimer Management Corp. in New York, said he believed that SAS would aim in the long term for close cooperation or a merger with several European car-

But Mr. Oberman, who manages holdings in Scandinavian companies, said an overhaul of SAS's structure would be needed to make

Mr. Carizon's plan workable. "I'm convinced that if he is going to put this together, then SAS will have to become a publicly traded vehicle and these holding companies will have to be put out of

existence," Mr. Oberman said, SAS is a consortium beld by the former national airlines of Sweden Denmark and Norway. Fifty percent of its shares are owned by the three governments, and the rest are traded in the names of the three separate holding companies. and landing capability.

Ronald B. Woodard, president of de Havilland Aircraft Co., at the Downsview plant.

De Havilland's Dash for Efficiency

Unit Keeps Its Name, but Will Produce 'the Boeing Way'

The Associated Press

By John F. Burns

W York Times Service TURUN IU - it takes a practiced eye to spot the changes un-der way at de Havilland Aircraft of Canada Ltd., the commuter arcraft manufacturer whose sale to Boeing Co. prompted accusations of a government giveaway in Canada 18 months ago.

the Toronto suburb of Downsview still carries the name of the British aviation pioneer who founded the company, Sir Geof-frey de Havilland. Keeping the company name was part of the 155 million Canadian dollar (\$115.8 million) deal struck by Boeing when it bought the lossridden manufacturer from the Canadian government.

On the roll-out apron in front of the executive offices sits the latest model on the production line, a 39-seat, short-haul airliner known as the Dash-8,

Inside, corridors are lined with photographs of the aircraft that have made de Havilland of Cana-da famous. Among them are the Chipmunk trainer, the Beaver, Otter and Twin Otter bush planes, and the Buffalo and Caribou, which are heavier planes renowned for their short take off

Workers Authorize Union to Call Strike Company executives do not

TORONTO - Production workers at de Havilland Airproblems.

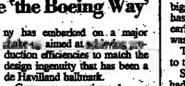

"Not everything here is rosy," said Ronald B. Woodard, de Havilland's 44-year-old president and a Boeing executive who was assigned here from Seattle in January with orders to turn the company into a profit-maker by 1988. As Mr. Woodard described it, the task involves nothing less than a wholesale reorganization of the

way, that Downsview's products are made When Boeing opened negotia-tions for de Havilland in 1985, it was looking at a company that had run up losses of more than 550 million dollars in the previous. 30 months.

Moreover, the losses had been accumulated in a period when the government, under pressure to intain a domestic aircraft man-

ufacturing industry, had pumper 650 million dollars in investment grants into the development of e four-engine Dash-8. Boeing, one of several foreign

LETTER FROM THE CHAIRMEN

The Solvay Group's activity in 1986 was sustained in all five of its sectors, thanks in part to several years of diver-sification efforts, to drastic economies, especially energy savings, and to favorable economic conditions. The consolidated net profit after

depreciation and taxes to 1986. was 9,931 million Belgian Francs (±246 million S), an increase of 22% over the 8,140 million Belgian Francs earned in 1985.

The decline in the price of oil products resulted to a reduction of feed-stock prices and contributed to the improvement of earnings but led as a consequence to a reduction of the selling price of several of the Group's products; this partially explains the de-crease of approximately 4% in our sales revenues, from 225 billion Belgian Francs in 1985 to 216 billion Belgian Francs (±5.343 billion S) in 1986.

- The decline of the dollar and of a number of currencies only slightly re-duced sales, profit and stockholders' equity expressed in Belgian Francs. In fact, the Group's structure, based on facilities to each country servicing their own domestic markets, makes it less vulnerable to currency exchange variations than other chemical groups which export heavily throughout the world from large plants located in their home countries.

Favorable evolution of our five sectors

Each of the five sectors of the Group had a positive contribution to our earnings to 1986.

In the Alkalis sector however, vol-umes, prices and sales were down from the year before.

In Peroxygens, the expansion of the Interox Group continued. Very modern, high performance facilities were brought on stream in the United Kingdom and to Holland.

The Plastics sector sharply increased volumes and earnings in 1986 compared to 1985. In the field of ethylens, the American cracker of CCPC (Corpus Christi Petrochemical Company), to which the Solvay Group holds 25%, was the subject of a letter of totent signed on February 27, 1987, under which we would sell, in July 1987, our share of CCPC's assets to Texas' Ster-

hing Group. The <u>Processing</u> sector grew in ear nings as well as sales. The <u>Health sectors</u> earnings devel-

SOIICI GOICI

Introducing a solid alternative for the gold futures trader. Introducing IMM Gold.

Why should you trade gold futures at the Chicago Mercantile Exchange? We're certainly not your only alternative. But we are an exchange that makes a lot of new contracts succeed.

Fifteen years ago, our International Monetary Market cleared about 150,000 contracts a year. Now, it clears more than that in an average day. Every year for ten years, we have broken our own record for growth. New contracts like IMM Gold are the biggest reason why. Today, 40% of the CME's total volume

Today, 40% of the CME's total volume is in contracts we've introduced within the past five years. Thirteen of our contracts trade more than a million times a year. No other exchange in the world can match that.

Now. at the request of many in the gold trading community, we're re-

launching IMM Gold. And we'll bring to that contract the same resources that helped our other contracts grow so fast. (Continued from) given in a magnetic and made in a series sterdam.

IMM Gold will trade in an exchange that brings together one of the largest groups of professional futures traders in the world. It will be open to every member of every division of the CME. And IMM Gold will be supported by the CME's efficient and reliable clearing system.

reliable clearing system. The Chicago Mercantile Exchange is making a total commitment to IMM Gold. We're going to do what it takes to provide the gold community with an efficient, reliable marketplace. We expect excellent liquidity right from the start. Try us. For our free brochure, Opportunities in IMM Gold Futures Trading, call 1-800-331-3332. In London call, (01) 920-0722.

CHICAGO MERCANTILE EXCHANGE® The Exchange of Ideas.

IMM Gold starts trading June 16.

BUSINESS ROUNDUP

garin Perrier Agrees to Buy **Big U.S. Water Bottler** a start a start

By Jacques Neher Special to the Herald Tribune PARIS - Perrier Group of America, a subsidiary of France's company has moved into the non-Source Pentier, said Monday that it Carbonated domestic sector, buyhad agreed to buy BCI Arrowhead ing small regional brands: Calis-Drinking Water Co., the largest toga Mineral Water of California, Drinking Water Co., the largest processor and distributor of bot-tled water in the United States.

The purchase of BCI Arrowhead from Beatrice Cos. would more than double Perrier's U.S. water sales to about \$460 million a year and serve to consolidate its grip on a fast-growing product category, cording to industry observers. The price was not disclosed. An

industry source said Beatrice had initially asked "upwards of \$500 million" for BCI Arrowhead, based in Monterey Park, California.

In Paris, a spokesman for Source Perner said the acquisition would be financed through an international investment group led by Société Générale. BCI Holdings Corp., which ac-

quired Beatrice Cos. in April of last year, put the water business on the block late in 1986. Last year, Source Perrier bought control of Dairy Fresh, a Califor-nia-based cheese retailer. Last sum-

Perrier Group of America, based. in Greenwich, Connecticut, said it had signed a definitive agree for the purchase, which is subject to U.S. regulatory approval. BCI Arrowhead processes and distributes the Arrowhead brand in

California, the Ozarka brand in Texas and the Great Bear brand in New Jersey.

For Perrier, the BCI Arrowhead purchase represents a major commitment to the noncarbonated botfied water business, according to William Deal, executive director of the International Bottled Water Association.

Perrier's U.S. unit has concen--trated on marketing the Perner brand sparkling water, which is bottled in France. Products sold under that brand represent about

\$200 million in annual sales, according to industry estimates. However, in recent years, the

taur launch vehicles for commercial use requiring an invest-Oasis Water Co. of Texas and Poment of about \$100 million. land Springs of Maine. This year, it. The second state of the se	

Dollars

run

deep.

Quietly and smoothly our financial talents flow through our many financial institutions in 64 countries.

From their source in France, where we deal with some 300,000 corporate clients, great and small. Including well over 200 of the top 250 French groups.

On through Europe, to the City of London, where our financial acumen runs through our own commercial and merchant banking institutions.

We are in the main stream of international finance.

That's why we have become a world leader in property leasing. And one of the two main French banks for Eurobonds, with a specialized subsidiary based in London. The funds we manage in French Unit Trusts and Mutual Funds have increased tenfold in 5 years.

Ř

bélier

Channelling our activities into 4 major holding companies, each a distinct subgroup: banking, finance, industrial and commercial investment, and property.

Drawing on our experience as banker to the French government for international borrowings. Acting as financial advisor to many of the major French groups currently being privatised.

As the swiftly moving currents of the financial world sweep on into the future, our expertises have broadened to include specific responses to today's new markets. Such as FIMAT, our innovative financial futures unit in France.

Others may make a splash, but Société Generale runs silent and runs deep. And with more than a touch of talent.

Non French Institutional Investors requiring information should call our Institutional Investors Department, Paris : 1.40.98.45.39.

Promotes Bowes To Presidency New York Times Service GREENWICH, Connection - Chrysler Capital Corp., the fast-growing high-finance arm Mener Ri-t

of Chrysler Corp., has promoted John M. Bowes to president and chief executive. Mr. Bowes, 40, who joined

the company in 1980, moves up from senior vice president in charge of leasing and invest-ment services. He succeeds John F. Duncan. 63, who is retiring after 39 years in finance. Chrysler Capital, a unit of Chrysler Financial Corp., hand dles financing of leveraged buyonts, real estate and aircraft leasing.

Formerly the finance unit of E.F. Hutton, it has increased its financial receivables to \$3.3 billion from \$1 billion since being acquired by Chrysler in 1985. This has bolstered Chrysler Financial, whose other businesses are installment loans for car buyers and consumer lending

DE HAVILLAND: Boeing Aims to Boost Efficiency

But to achieve anything close to that figure on a profitable basis, the

Downsview plant must undergo a major shakedown to make it "effi-

cient in the Boeing sense," accord-

ing to Dean Thornton, president of

Boeing's sales arm, Boeing Com-mercial Airplane Co.

Mr. Thornton said that de Havilland was the "picture of a disorga-

nized company" when Boeing took

overruns. Sales were being lost vir-

tually every moath because the

company could not guarantee de-

livery within a reasonable period.

Over Toshiba's Sales to Soviet

Japan Indicts 2

United Press International TOKYO --- Two Toshiba Machine Co. executives were indicted Monday on charges of violating Japan's foreign-exchange laws in connection with illegal sales of sensitive technol-ogy to the Soviet Union, Kyodo News Service said.

It named the two as Yuzo Hayashi, 52, chief of Toshiba Machine's materials storage division, and Hiroaki Tanimura, 50, vice director of the machine

technology division. Kyodo said the indictment alleged that the two men were involved in the illegal export of parts and a computer program to the Soviet Union in 1984. U.S. officials have claimed that the sale by Toshiba Ma-chine, a subsidiary of Toshiba Corp., helped the Soviet Union produce submarines with quiet er-running propellers.

Options Exchange announces the opening of our new European office.

In 1973, The Chicago Board Options Exchange created the first marketplace to trade options, and revolutionized the securities industry. Today we trade more than 800,000 contracts per day,

making us the world's premier options exchange. We trade options on 165 of the largest and best-known U.S. stocks, including such companies as IBM, General Motors, AT&T, Exxon and Eastman Kodak.

CBOE created the first index option, the Standard & Poor's 100, providing investors the opportunity to participate in the U.S. stock market with a single investment vehicle.

CBOE also is revolutionizing the way the options world trades, with the most technologically advanced automated trading system available. This gives brokers and investors around the world instant access to the CBOE floor, for immediate communication and split-second transactions.

And, CBOE has created the Options Institute, the only comprehensive training program available today. It's designed to educate brokers and institutional investors about the options market and options strategies.

To find out how options can be an important part of your investment strategy, call or write: Jonelle Daniels Manager European Marketing 43 London Wall

BIS: Industrial Powers Are Told That Failure to Harmonize Policies Could Cause Global Harm

the United States dried up late last year and in the first quarter of 1987. The means that the huge U.S. current-account deficit was financed essentially through official dollar purchases - largely the result of intervention in the foreignexchange market.

There are limits to these purchases, BIS said. To be effective, "intervention will have to make an impact on market psychology" which means that it must be part of a broad international strategy.

This strategy needs to be geared not simply to reducing the current payments imbalances, BIS said. The trims must be accomplished "without causing disruptive developments in the foreign exchange and financial markets" - including a resurgence of inflation or re- slowing world economic growth

'Fatigue' With Baker Debt Plan Is Reported Reuters BASEL Switzerland — A lasting solution to the Third World debt crisis still seems a long way off, especially after setbacks last year, the Bank for International Settlements said Monday.

lo its annual report, the bank said debtors and bankers are showing "signs of fatigue" with the debt strategy launched nearly two years ago by the U.S. Treasury secretary, James A. Baker 3d.

It said much of the improvement seen in 1984 and 1985 had been lost, and heavily indebted developing countries were now finding it even more difficult to meet their commitments.

BIS played a key role when the debt crisis exploded in 1982 and 1983.

"The events of 1986 suggest that considerable time and further efforts will be needed to achieve a lasting solution to the international debt prob-lems," it said,

BIS said the basie ideas in the Baker initiative were still valid; that debtor countries oeeded to promote more growth, oot impose austerity.

"No debt strategy can possibly succeed without stroog and sustained efforts on the part of debtor countries," it said.

But those efforts by the debtor countries would not be enough to pull them out of their present difficulties without markets to export to and access to outside funds - preferably oot in the form of more debt, the BIS report said.

Last year's setback had its roots in low raw material prices, which held down export receipts, and ecocomie mismanagement, the bank said.

BIS said developing countries should adopt poli-cies that would induce the repatriation of flight capital, money taken overseas by residents who seek better returns elsewhere or fear internal political and financial instability.

But the Bank for International Settlements also said industrial countries should resist protectionist pressures and keep markets open for imports from the developing world, however difficult that might be in face of high unemployment and strong agricultural lobbies.

DOESN'T NEATNESS COUNT FOR ANYTHING ANYMORE ?!

ALVAREZ:

Adventures of a Physicist

RABI: Scientist and Citizen

Street, New York, N. Y. 10022.

Reviewed by Alan Lightman

By Luis W. Alvarez. 292 pages. \$19.95.

By John S. Rigden. 302 pages. \$21.95.

and Newton cannot find their way to Berkeley to celebrate his work. Resigned to present and future admirers, Alvarez tells us in his autobiography, "Alvarez," that he had the longest Nobel Prize citation ever, was the first physi-

cist to win the National Medal of Science, the

first to use cosmic rays for a practical purpose,

the first civilian to land an airplane under

radar control (using the first ground-controlled

approach system, which he invented). Once our eyes have adjusted to this incandescent egotism, we indeed see a genius, who eventual-ly endears himself with astonishing honesty.

Beyond its self-portrait, "Alvarez" provides an exceptionally clear view of the world of science. Still active in his mid-70s, Alvarez is

already a legend. His career has been uncon-ventional. If Alvarez had only perfected the hydrogen bubble chamber to track subatomic

particles, transformed the cyclotron into a working tool, discovered the capture of elec-trons by atomic nuclei, and helped develop

ple passions of 1.1. Rabi, who might leave the lab to go to the opera and who is the subject of John Rigden's well-researched biography. "Rahi." Rabi won his Nobel Prize in physics in 1944, for developing new methods for measur-ing the magnetic properties of atomic nucles." Born in 1898 in Eastern Europe and brought up as Orthodox Law in Resolution Participation up as an Orthodox Jew in Brooklyn, Rabi resolved in college oever to read in the subjects he was taking courses. If he was taking a course in chemistry, he might be reading Freud. Al-though religion was eventually transcended hy physics. God remained a symbol for truth. Whenever one of Rabi's students came to him with a scientific project. Rabi asked only one qoestion: "Will it hring you nearer to God?" The students always understood what he meant.

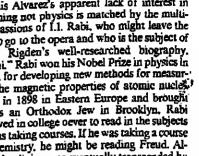

Some of Rabi's greatest discoveries were made because of his laziness and distaste for details. He invented the technique of reversing the magnetic fields along the path of particles in molecular beams because this new procedure allowed a quick determination of nuclear spins, without any calculations. Rabi com-plains that the old way of making this measure-ment required that you "sit down and just calculate it from the data points. . . . That didn't please me, it seemed to me a tedious sort of thing."

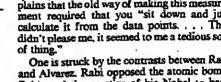

One is struck by the contrasts between Rabi and Alvarez. Rabi opposed the atomic bomb. and Alvarez, Rabi opposed the atomic bond Rahi used the prestige of his Nobel to back causes. Alvarez refused to sign petitions for fear of being used. Rabi left active research after World War II to become a statement of science. Alvarez could never stop doing phys-

Kareem Abdul-Jabbar, who led the winners with 32 points, tightly guarded by Bill Walton during the first half of Game 6.

Padres, on a Roll, Win Third Straight

Compiled by Our Staff From Dispatches SAN FRANCISCO - The San Diego Padres, returning to the stadium where they began this dismal season by dropping three games, ning the trip with a 5-19 road a Sunday built its first three-game and only 12 victories all year. winning streak of the year with a 4triumph over the San Francisco Giants.

"I hope we don't have to wait this long again for three in a row," said

BASEBALL ROUNDUP

Manager Larry Bowa after Dave Dravecky's five-hitter game brought San Diego's record to 18-46.

This is where we started, maybe this is the place where we turn it around," said Carme0o Martinez, who doubled and homered to spark the winners' offense. "If we get down now, it's over. We've still got 100 games left. We may not be able to win, but maybe we'll become a .500 ballcluh. That's a lot better

than where we started. The Padres won only their second

Giants four runs in four games (they dropped Friday's opener, I-0). San Diego concluded its 13-game road swing with six triumphs after beginning the trip with a 5-19 road record

"I think the key is not making mental mistakes," said Bowa, "We haven't made a lot recently. You give the other team five or six outs

concerned Manager Roger Craig, who said: "The run we scored was on two bloop hits. The Padres looked like the best pitching staff in the National League, but their team ERA was over 5.00 coming in. Their pitching was so good, we played a four-game series without seeing [ace reliever Rich] Gossage." San Diego scored twice before Dravecky took the mound. Draout six and turned in his first complete game since May 26, 1986. "I felt very good. I felt stronger in the ninth than I did in the first," he said.

cloud of smoke.

His entrance was on the grand scale, suggesting that the match, which was to be staged here Monday night, was worthy of major-

league theatrics. But in the days leading up to "The When Cooney fought Larry up the affection and rooting interest War at The Shore," as the fight has Holmes in June 1982, the bout was of many boxing fans. been billed, the smoky cloud from sold to the public partly with a nifics than for the glitter of a hotticket heavyweight showdown,

McEnroe Out **Of Wimbledon: Back Problems**

United Press International LONDON - John McEnroe withdrew from the Wunbledon

tennis tournament Monday beute.' cause of hack problems. "There is no reason for me to

go unless I am 100 percent fit," said McEnroe, a three-time winner of the event, in a telex to tournament organizers. "I have not been able to train adequately" since returning from the recent French Open.

In the telex, his agent said that MeEnroe "continues to be plagued by the back problems that have caused him trouble all year. His physicians have advised him to take at least four weeks off." Wimbledon begins next Monday.

Snead Is Winner

Over Ballesteros in U.S. Golf Playoff

The Associated Press HARRISON, New York - J.C. Snead parred the first hole of a sudden-death playoff Sunday to defeat Seve Ballesteros and win the Westchester Classic golf tournament. Ballesteros, who had forced the playoff with a birdie on the 72d hole, pulled his drive into deep rough. Snead then used a 4-iron off

the tee and reached the green of the 304-yard hole in two. Ballesteros Natives. detensionan. ART BUCHWALD Little Miss Shredder

WASHINGTON - Wben or congressional immunity, which-ever comes first. to the congressional Irangate committee, there were sighs of envy in self for." olfices all over America. The sighs had nothing to do with Hall's looks but rather with how she performed as Ollie North's secretary. No one had ever seen a secretary

who behaved like Hall, and after these hearings they may never see one again. Faithful, skilled and discreet beyond imagination, Fawn is the yardstick by which all future Buchwald secretaries will be measured

As might be expected, the National Security Council is baving a difficult time finding a replacement for ber.

"Miss Peters, if I asked you to shred my top-secret documents, would you do it?"

"I would if I had time, but I still baven't finished the A's on your Rolodex."

"Forget the Roledex, 1 would like you to alter several pages of the most confidential material I have in my safe."

"I'd like to but it would be wrong, because I have a date with my boyfriend at 5 o'clock. Can't the altering wait over the weekend?

"This is bush-bush stuff, Miss Peters. If anyone finds out what we're doing we could get 20 years

Dance Named 'Streetcar' To Open Spoleto Festival

The Associated Press ROME — A dance version of Tennessee Williams's play, "A Streetcar Named Desire," by the Stuttgart Ballet, choreographed by John Neumier, will open Gian Carlo Menotti's Festival of Two Worlds June 24-July 12 in Spoleto. In all, there will be 63 productions. Menotti founded the festival in

1957. He took the festival to Charleston, South Carolina, in a team player?" 1977, to realize his idea of the two "Nope," worlds, and last year expanded it 10

"How loyal are you, Miss Peters" "I'm loyal to a point, but this job is nothing to write home about." "Suppose I asked you to smuggle out some very important documents under your dress on your

"That isn't worth perjuring my-

back. Would you do it for me?" "Sure, if you're looking for a sexual harassment suit." "Please, Miss Peters, I picked

you for this job because you had the makings of a first-class shredder and paragraph alterer. We may have to move against the FBI at any time. Are you willing to go that

far?" "Yes, because I respect you and everything you stand for -- except dy film. for one thing. You might take the Fifth Amendment and leave me

holding the bag." "This country's security is at stake, so start deleting."

"What do you want me to delese?

"Everything in pile A. Then I want you to shred everything in pile B. After that mix them in pile C, put them in your boots and trot out of the building." "Why should 1 do that?"

"Because that's what Fawn would do if she were here right DOW."

"Boy, all you hear around here is what Fawn would do."

"I'm sorry I blew my stack, Miss Peters. Here is \$60 worth of traveler's checks. Shred them and sprin kle them over Bloomingdale's." "Okay. Is there anything else you want me to do before I start hitting the word processor?" "Bc careful, Miss Peters. The things you type on that processor could start World War III."

"Why didn't you say so? What keys shouldn't I use?" "It is not your job to ask. Fawn never questioned what went into ber computer and what came out. Do yon know why?" "No, I don't."

Because she was 3 team player And do you know what made Fawn "She had the promise of limited

Inherent in their bondage is an that is, with little or no attention expression of interdependence, a to ethnic status. theme that was not lost on some "48 Hrs.," a film that garnered more than \$77 million in showcritics. Bosley Crowther of The New York Times called the film ings in American theaters. Now, "a strong, stark symbolization of an abstract truism" and "a remarkably apt and dramatic visualization of a social idea - the idea of men of different races brought together to face misfortune in a bond of brotherhood. Each is the victim of cruel oppressions, each has his hopes and creams."

A common assertion among producers and directors is that 6. they cast films race-neutrally ---

stars," Silver said. "You get a good director, a good premise, with funny moments and good action. If it all works, then you've got a hit movie. With Mel (Gibson) and Danny (Glover), it works."

Silver admits to a preference for varied casts — "I like a lot of color in my movies, Asian actors, Latin actors, black actors" - but insists that his films do not deliberately observe a racial quota. "The original cast for '48 Hrs.' was to be Lee Marvin and Gene Hackman," he said.

Harlan Jacobsen, co-editor of Film Comment magazine, disagrees.

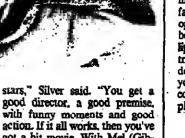

"I don't think any producer wants to create a controversial story along racial lines. a story of a wrong that might prove to be on the cutting edge of people's think-ing. That would be box-office poi-

Weapon."

Joel Silver was co-producer of

"But if people say they are not cognizant that they're pairing a black actor with a white actor, they're not being entirely forthcoming about the chemistry that

nearly five years later, "Lethal ultimately translates into market-"It's clear that Hollywood is staying away from racial topics," Jacobsen said. "Most of these Weapon," a film with much the same formula - protagonists of different races in a police thriller - may eclipse the drawing power Jacobsen said. "Most of these of "48 Hrs" at the box office. pairings cater to some desire to "Lethal Weapon," which Silver also co-produced, has earned over see blacks and whites together, but many movies give people per-\$58 million in the United States mission to have their stereotypes. and Canada since opening March These films also cater to our pre-"You bope and pray that there conceptions - and they're marwill he chemistry between your keted that way."

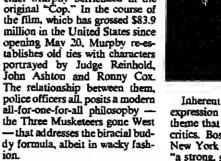

The supersonic aircraft Concorde made one of its shortest and slowest journeys over the weekend. when a professional strongman hauled it 40 feet across the tarmac hauten it 40 reer across the tarmac at London's Heathrow Airport in a feat for charity. David Gauder, 32, taking a footbold in a ladder-like contraption on the ground, gripped a rope attached to the 91-ton ancraft and hauled until he got the plane to roll. Béjart, Dance Company,

. . . .

To Move From Brussels Marrice Bejart, founder and di rector of the Brussels-based Balle and of the 20th Century, confirmed that contract expires at the end of this month and move his 60-member company to Lausanne, Switze-land. He notified the Belgian Edu-cation Ministry from Lening where the company is on tour. The apparent basis of his decision is a conflict with Gerard Mortier, direc-tor since 1981 of the Thèâtre de la Monnaie, where Bejart has been based for 27 years. The French choreographer accuses Mortier of havrecigrapher accuses Morrier of hav-ing neglected the dance company in favor of strengthening the theater's operatic activities. Bejart, 60, has been closely associated with Parlippe Bramschweig, a Swiss indus-trialist, in the founding of the Prix de Lausanne, a competition for young dancers, and more recently a competition for young choreographers due to start next year.
